# EXECUTIVE SUMMARY

The *Development Charges Act, 1997 (DCA)* and its associated *Ontario Regulation 82/98 (O. Reg. 82/98)* allow municipalities to impose development charges on development and redevelopment to pay for development-related capital costs. This 2022 City of Vaughan Development Charges Background Study is presented as part of a process to establish a development charges by-law that complies with this legislation.

## A. PURPOSE OF THE 2022 DEVELOPMENT CHARGES (DC) BACKGROUND STUDY

### i. Legislative Context

The City of Vaughan 2022 Development Charges Background Study is presented as part of the process to lead to the approval of new DC by-laws in compliance with the *DCA*. The study is prepared in accordance with the *DCA* and associated regulations, including amendments that came into force through the *More Homes, More Choice Act* and *COVID-19 Economic Recovery Act*.

### ii. Key Steps in Determining Future Development-Related Projects

In accordance with the *DCA* and associated regulations, several key steps are required to calculate development charges. This includes preparing a development forecast, establishing historical service levels, determining the increase in need for services arising from development and appropriate shares of costs, and attribution to development types (i.e. residential and non-residential).

### iii. DC Eligible and Ineligible Costs

Development charges are intended to pay for the initial round of capital costs needed to service development over an identified planning period. This is based on the overarching principle that “growth pays for growth”. However, the *DCA* and associated regulation includes several statutory adjustments and deductions that prevent these costs from fully being recovered by growth. Such adjustments include, but are not limited to: ineligible costs (e.g. computer equipment and vehicles with a replacement life of less than seven years); ineligible services, including parking facilities, parkland acquisition, etc.; deductions for costs that exceed historical service level caps; and statutory exemptions for specific uses (e.g. industrial expansions).

#### iv. The Development-Related Capital Program is Subject to Change

It is recommended that Council adopt the development-related capital program developed for the purposes of the 2022 DC Background Study. However, it is recognized that the DC Background Study is a point-in-time analysis and there may be changes to project timing, scope and costs through the City’s normal annual budget process.

### B. DEVELOPMENT FORECAST

The tables below summarize the anticipated residential and non-residential development over the 2022 to 2031 planning period. Details on the development forecast are provided in Appendix A.

Development Type	2021 Estimate	Planning Period 2022 - 2031	
		Growth	Total at 2031
<b>Residential</b>			
Total Occupied Dwellings	104,570	29,723	134,293
- <i>Singles &amp; Semis</i>		12,114	
- <i>Rows &amp; Other Multiples</i>		5,940	
- <i>Apartments</i>		11,669	
Total Population			
Census	332,114	82,517	414,632
<i>Population In New Dwellings</i>		82,568	
<b>Non-Residential</b>			
Place of Work Employment	231,293	39,244	270,537
- <i>Population Related</i>		9,939	
- <i>Employment Land</i>		21,482	
- <i>Major Office</i>		7,823	
Non-Residential Building Space (sq.m.)		2,557,351	
- <i>Population Related</i>		487,018	
- <i>Employment Land</i>		1,890,399	
- <i>Major Office</i>		179,933	

## C. CALCULATED CITY-WIDE DEVELOPMENT CHARGES

The table below provides the City-wide development charges for residential and non-residential development based on the aforementioned forecast.

Service	Residential Charge by Unit Type <sup>1</sup>				Non-Residential Charge per Square Metre
	Singles & Semis	Townhouses & Multiples	Large Apartments (> 700 sq.ft.)	Small Apartments (< 700 sq.ft.)	
<b>TOTAL CITY-WIDE CHARGE</b>	<b>\$ 86,033</b>	<b>\$ 70,780</b>	<b>\$ 53,462</b>	<b>\$ 38,530</b>	<b>\$ 276.36</b>
<sup>1</sup> Based on Persons Per Unit Of:	3.57	2.94	2.22	1.60	

## D. AREA-SPECIFIC DEVELOPMENT CHARGES

Consistent with the City's 2018 DC Study, area-specific development charges are proposed various water, wastewater and storm drainage services. Further details of the analysis can be found in Appendix H.

The ASDCs calculated for the purposes of this background study are summarized below. It should be noted that two of the service areas will be charged on a per unit basis for residential development and per square metre of gross floor area for non-residential development, while the balance of the ASDCs will be levied on a land area basis (\$/hectare).

Service Area - Charge per Hectare	Net Cost	Net Developable Area (Ha)	Charge Per Net Developable Hectare
<b>Carry Forward ASDCs</b>			
Rainbow Creek Drainage Works	\$2,392,862	557.73	\$4,290
Pressure District 5 West Woodbridge Watermain	\$1,125,266	139.23	\$8,082
Zenway/Huntington Road Sanitary Sub-Trunk	\$3,411,627	322.46	\$10,580
Huntington Road Sanitary Sewer (Trade Valley to Rutherford)	\$2,187,453	255.21	\$8,571
Highway 27 South Servicing Works	\$881,929	5.11	\$172,589
VMC - Interchange Storm Water	\$82,323,126	54.43	\$1,512,542
Steeles West Sanitary Sewer Improvement Works	\$2,695,700	37.60	\$71,695
Steeles West SWM Works	\$46,426,284	37.60	\$1,234,757
Woodbridge Avenue Sanitary Sewer Improvments	\$667,626	22.26	\$29,991
<b>New ASDCs</b>			
Rainbow Creek (Milani Blvd) Sanitary Trunk Sewer	\$378,329	119.48	\$3,166

ASDC - Charge per Unit and per Square Metre	<i>CARRY FORWARD</i>	<i>NEW ASDC</i>
	VMC SE Doughton Sanitary Sewer	VMC Jane Street Sanitary Sewer
<b>Charge per Residential Unit</b>		
Singles & Semis	\$ 709	\$ 345
Townhouses & Multiples	\$ 584	\$ 284
Large Apartments (>= 700 square feet)	\$ 441	\$ 214
Small Apartments (< 700 square feet)	\$ 318	\$ 154
<b>Charge per Square Metre of Non-Residential GFA</b>	\$ 6.98	\$ 3.81

It should be noted that the City may pass ASDC by-laws for other areas in the future, or update these ASDCs, as more detailed planning and engineering information becomes available. It should be noted that the Edgeley Pond and Black Creek Channel Works ASDC recently updated in 2021 as well as the VMC West Interchange Sanitary Sewer ASDC also updated in 2021 are not being reviewed as part of this study. Furthermore, the ASDC associated with the Pressure District 7 Watermain west is now fully built out and can be closed.

## **E. LONG-TERM CAPITAL & OPERATING COSTS**

An overview of the long-term capital and operating costs for the capital facilities and infrastructure to be included in the DC by-law is provided in the study. This examination is required by the *DCA*. Additional details on the long-term capital and operating impact analysis are found in Appendix J. By 2031, the City’s annual net operating costs arising from the development-related infrastructure are estimated at about \$68.5 million.

For the all City-wide services (including all general and engineering services), about \$40.6 million of development-related project costs will need to be funded from non-development charges sources over the next ten years. Interim financing of \$1.1 billion to 2031 may be required for projects that include other development-related funding sources (including post-period benefit to be considered in future by-laws or other growth-funding tools).

## **F. ASSET MANAGEMENT PLAN**

The main purpose of the Asset Management Plan is to demonstrate that all assets proposed to be funded under the DC by-law are financially sustainable over their full life cycle. The DC recoverable annual asset management contributions for the 2022 to 2031 planning period have been calculated. The year 2032 has been included to calculate the annual contribution for the 2022 to 2031 period as the expenditures in 2031 will not trigger asset management contributions until 2032.

The City will need to fund an additional \$29.8 million per annum by to properly fund the full life cycle costs of all assets supported under the by-law. An additional \$2.5 million will need to be funded for the City’s area-specific development charge assets.

## **G. CITY’S DEVELOPMENT CHARGES BY-LAW TO BE RELEASED UNDER SEPARATE COVER**

The City’s proposed 2022 DC by-law will be made available under separate cover a minimum of two weeks in advance of the statutory public meeting in accordance with the requirements of the DCA.

Of particular importance, the definitions that will be included in the DC Bylaw are used for the purposes of administering the City’s development charges. In the event that definitions in other municipal documents (e.g. Official Plan or Zoning By-law) differs from the DC By-law, the language in the DC By-law prevails.

## **H. THE 2022 DC BACKGROUND STUDY IS BASED ON THE BEST AVAILABLE INFORMATION**

The 2022 DC Background Study has been prepared based on the best available information at the time of preparing this report and is subject to change based on future operating and capital business plans presented to Council as part of the annual budgeting process. Any excess capacity that occurs over the five-year life of the DC By-law is expected to be recovered from future development as part of the capital plans approved by Council during this period.

## **I. CONSULTATION AND APPROVAL PROCESS**

The following provides a summary of the consultation and approval process undertaken to complete the 2022 DC Study. Following the release of the DC Background Study, consultation will continue with the public and development industry stakeholders prior to the passage of the new 2022 DC By-law in June 2022.

<b>Activity</b>	<b>Timeline</b>
Stakeholder Consultation	January 20 <sup>th</sup> 2022
Sessions Prior to Release of DC	February 25 <sup>th</sup> 2022
Background Study	March 1 <sup>st</sup> 2022
	March 18 <sup>th</sup> 2022

Public Release of DC Background Study	April 12 <sup>th</sup> 2022
Technical Stakeholder Consultation Sessions Following the Release of the DC Background Study	Ongoing (April to June 2022)
Statutory Public Meeting	May 10 <sup>th</sup> 2022
Passage of 2022 DC By-law	June 28 <sup>th</sup> 2022 (Committee of Council approval will be sought the previous week)

# 1. INTRODUCTION

The *Development Charges Act, 1997 (DCA)* and its associated *Ontario Regulation 82/98 (O. Reg. 82/98)* allow municipalities in Ontario to recover growth-related capital costs from new development. The City of Vaughan Development Charges Background Study is presented as part of a process to pass a new development charge by-law in compliance with this legislation.

Development forecasts for the City of Vaughan between 2022 and 2031 will increase the demand for all City services. The City wishes to continue implementing DCs to fund capital projects related to development so that growth can continue to be serviced in a fiscally responsible manner.

When passing a DC by-law, the *DCA* and *O. Reg. 82/98* require that a development charges background study be prepared in which DCs are determined with reference to:

- A forecast of the amount, type and location of development anticipated in the City;
- The average level of service provided by the City over the ten-year period immediately preceding the preparation of the background study;
- A review of capital works in progress and anticipated future capital projects, including an analysis of gross expenditures, funding sources, and net expenditures incurred or to be incurred by the City or its local boards to provide for the expected development, including the determination of the development and non-development-related components of the capital projects;
- An examination of the long-term capital and operating costs for the capital infrastructure required for each service to which the development charges by-laws would relate; and
- An Asset Management Plan to deal with all assets whose capital costs are proposed to be funded under the DC By-law, demonstrating that all assets included in the capital program are financially sustainable over their full life cycle.

The background study establishes the net capital costs attributable to development that is forecast to occur in the City of Vaughan between 2022 and 2031. These development-related net capital costs are apportioned to residential and non-residential development in a manner that reflects the increase in the need for each service.

The *DCA* provides for a period of public review and comment regarding the proposed development charges. This process includes considering and responding to comments received by members of the public about the calculated charges and methodology used. Following completion of this process, and in accordance with the *DCA* and Council's review of the study, it is intended that Council will pass new development charges for the City.

The remainder of this study sets out the information and analysis upon which the proposed development charges are based.

**Section II** designates the services for which the DCs are calculated and the areas within the City to which the DCs will apply. It also briefly reviews the methodologies that have been used in this background study.

**Section III** presents a summary of the forecast residential and non-residential development which is expected to occur within the City over a planning period from 2021 to 2031.

**Section IV** summarizes the ten-year historical average capital service levels that have been attained in the City, which form the basis for the development charges calculations.

In **Section V**, the development-related capital program that has been developed by various City departments is reviewed.

**Section VI** summarizes the calculation of applicable development charges and the resulting calculated development charges by class and type of development, including the calculation of updated area-specific development charges.

**Section VII** compares the calculated development charges with those currently in force in the City.

**Section VIII** presents a cost of growth analysis, which considers an Asset Management Plan for the City, demonstrating the financial sustainability of assets over the life cycle of the 2022 Development Charges By-law and satisfying the requirements of the recent amendments to the *DCA*. Additionally, the long-term operating impacts of the projects considered under this study are reviewed.

**Section IX** provides a review of development charges administrative matters and consideration of area rating.

## 2. A CITY-WIDE & AREA-SPECIFIC METHODOLOGY ALIGNS COSTS AND BENEFITS

Several key steps are required when calculating any development charge. However, specific circumstances arise in each municipality that must be reflected in the calculation.

Therefore, the study has been tailored to the local conditions that exist in the City of Vaughan. The approach to the proposed development charges is focused on providing a reasonable alignment of development-related costs with the development that necessitates them. The study uses a City-wide approach for general services and City-wide Engineering services as well as area-specific development charges for sanitary sewer and storm drainage works, which is consistent with past practice, and is deemed the best approach to align development-related costs and benefits.

### A. BOTH CITY-WIDE AND AREA-SPECIFIC DEVELOPMENT CHARGES ARE PROPOSED

The City of Vaughan provides a wide range of services to the community it serves and has an extensive inventory of facilities, land, infrastructure, vehicles and equipment. The *DCA* provides municipalities with flexibility to define services that will be included in the development charge by-laws, provided that the other provisions of the Act and its associated regulations are met. The *DCA* also requires the by-laws to designate the areas within which the DCs shall be imposed. Development charges may apply to all lands in the municipality or to other designated development areas as specified in the by-laws.

#### i. Services Based on a City-Wide Approach

For the majority of the development charge eligible services that the City provides, the full range of capital facilities, land, equipment and infrastructure is available throughout the City. A widely accepted method for recovering the development-related capital costs for such services is to apportion them over all new development anticipated in the City.

The following services are included in the City-wide development charge calculation:

- Development-Related Studies;
- Library Services;
- Fire Services;

- Community Services (which includes Parks and Recreation and Services related to proceedings under the Provincial Offences Act, including by-law enforcement services and municipally administered court services).
- Services Related to a Highway: Public Works - Buildings and Fleet; and
- City-wide Engineering (which includes: Services Related to a Highway, Water services; Storm drainage and control services; and Development related studies).

These services form a reasonable basis upon which to plan and administer the development charges. It is noted that the analysis of each of these services examines the individual capital facilities and equipment currently in place. The resulting development charge for these services is to be imposed against all development anywhere in the City. For illustration purposes, the summary tables show the service categories between general and city-wide engineering.

## ii. **Area-Specific Development Charges Are Proposed**

For some services that the City provides, the need for development-related capital additions to support anticipated development is more localized. For such services, where costs and benefits are more localized, an alternative technique – the area-specific approach – is employed.

The area-specific charges relate to the provision of wastewater (sanitary sewerage) collection trunks and select storm drainage works. It is noted that new water infrastructure is included in the City-wide Engineering development charge rather than in the area-specific services.

A review of wastewater (sanitary sewer) and storm drainage capital servicing plans indicates that there are considerable differences in the servicing requirements of the various areas that are to be developed as the City grows. The wastewater and stormwater collection systems require differing additional, identifiable and independent projects in order to provide for anticipated growth. The area-specific approach is applied to these services to more closely align the capital costs with the particular areas that will be serviced by the required infrastructure.

Area-specific development charges are therefore calculated for the following services:

- Wastewater Services; and
- Select Storm Drainage Services.

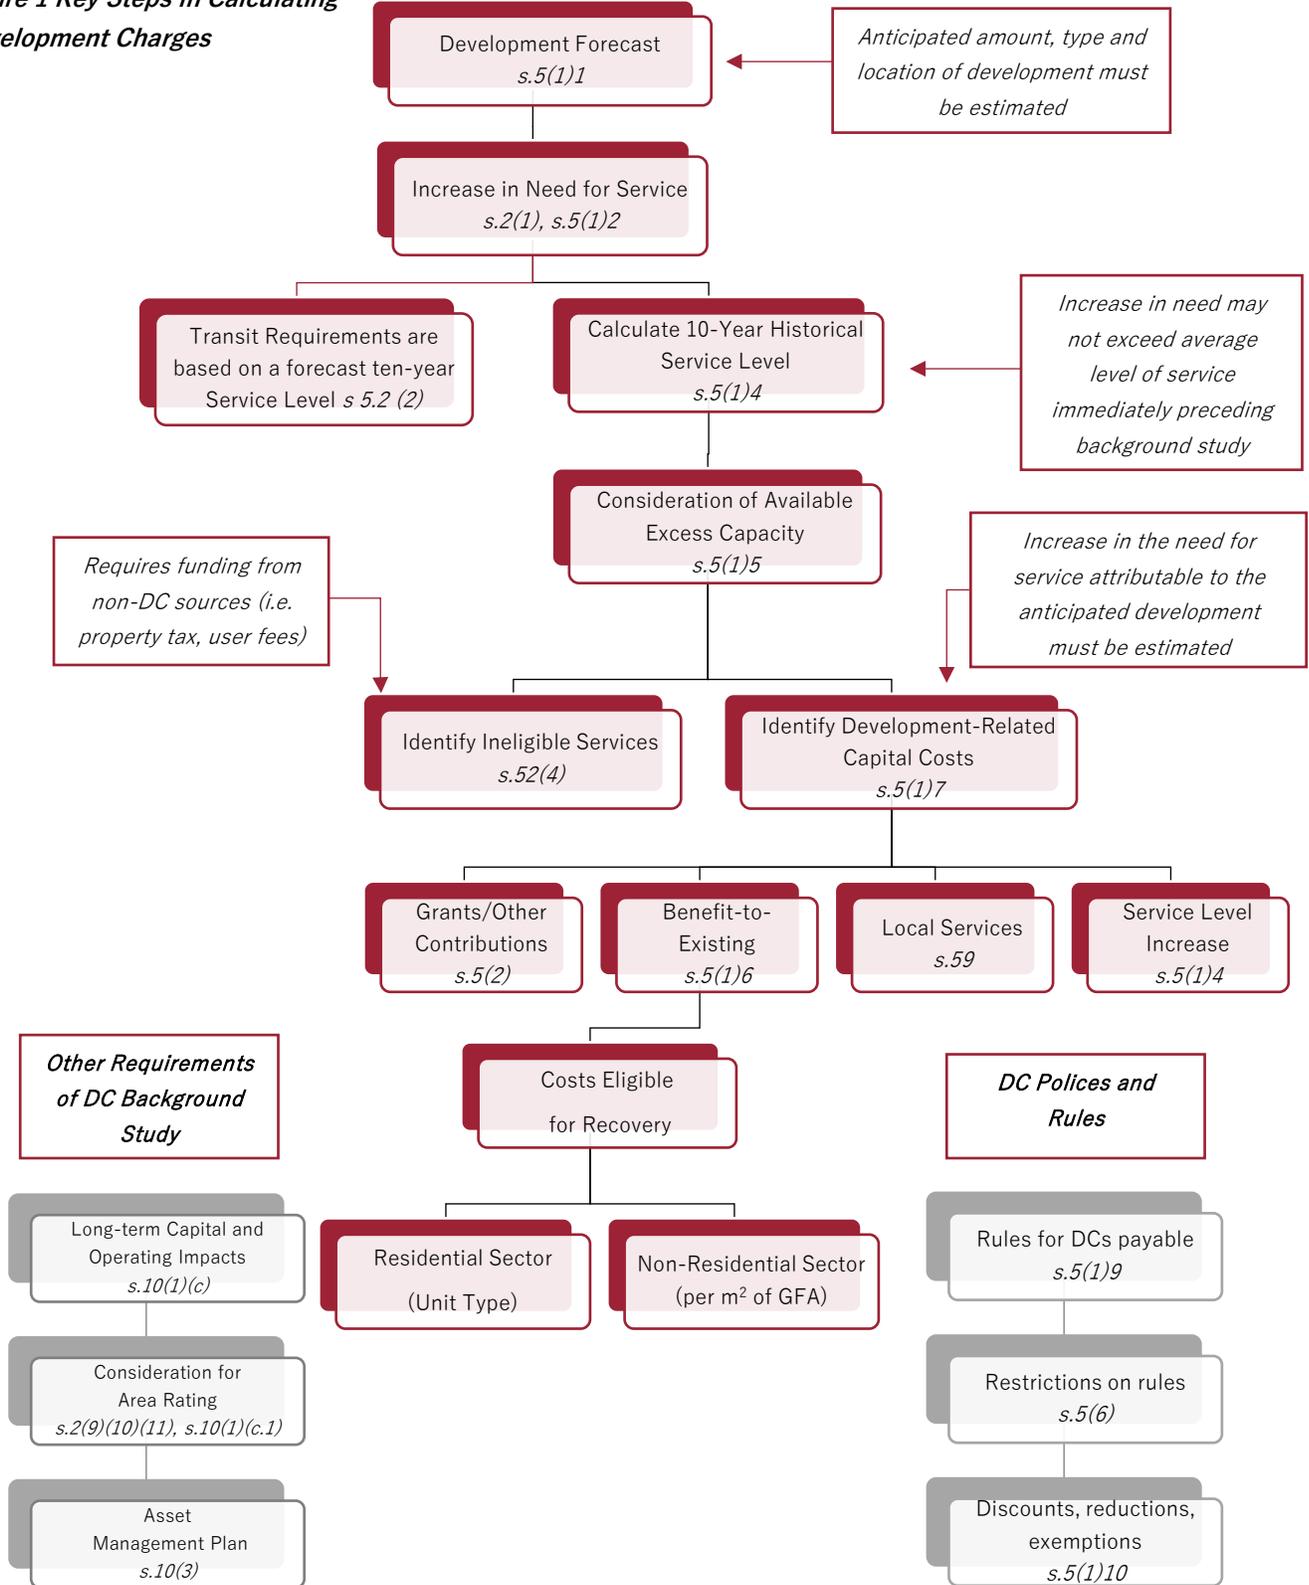

The area-specific approach for these services reflects the fact that the demand for, and benefit from, the projects provided by the City is much more localized than that for other City services. Area-specific charges result in a more accurate distribution of costs among developers than the City-wide approach. The geographic areas that are included coincide with the specific service area for each sanitary sewer or storm drainage project.

The area-specific approach also facilitates front-end financing or credit agreements for the designated services if the City chooses to use these provisions of the DCA. As an alternative that is more commonly used in Vaughan, the area-specific charges also facilitate the use of developer group agreements.

## **B. KEY STEPS IN DETERMINING DEVELOPMENT CHARGES FOR FUTURE DEVELOPMENT-RELATED PROJECTS**

Several key steps are required in calculating DCs for future development-related projects. These are summarized in Figure 1 below and discussed further in the following sections.

**Figure 1 Key Steps in Calculating Development Charges**

## i. **Development Forecast**

The first step in the methodology requires that a development forecast be prepared for the planning period from 2022 to 2031 for all services. The forecasts of population, households and employment are based on the 2031 targets for the City as identified in the Region of York's 2017 Development Charges Background Study, which reflects a 45 per cent intensification scenario as approved by Regional Council. The DC forecast 2031 targets and methodology used in this study also remain consistent with those used in the City of Vaughan 2018 Development Charges Background Study.

For the residential portion of the forecast, the net population growth, population growth in new units, and adjusted population growth (which includes population in seasonal or non-permanent dwellings) is estimated. The adjusted population growth determines the need for additional facilities and provides the foundation for the development-related capital program.

When calculating the development charge however, the development-related net capital costs are spread over the total additional population that occupy new housing units. This population in new units represents the population from which development charges will be collected.

The non-residential portion of the forecast estimates the Gross Floor Area (GFA) of building space to be developed over the ten-year period, 2022 to 2031. The forecast provides estimates for three categories: population-related development, major office development, and employment land development. The forecast of GFA is based on the employment forecast for the City. Factors for floor space per worker by category are used to convert the employment forecast into gross floor areas for the purposes of the development charges study.

## ii. **Service Categories and Historical Service Levels**

The *DCA* provides that the increase in the need for service attributable to anticipated development:

... must not include an increase that would result in the level of service exceeding the average level of that service provided in the municipality over the ten-year period immediately preceding the preparation of the background study...(s. 5. (1) 4.)

Historical ten-year average service levels thus form the basis for development charges. A review of the City's capital service levels for buildings, land, vehicles and so on, has therefore been prepared as a reference for the calculation, so that the portion of future capital projects

that may be included in the development charge can be determined. The historical service levels used in this study have been calculated based on the period 2012 to 2021.

For the ASDC “hard” services, such as wastewater and storm drainage, historical service level standards are less applicable and reference is made to the City’s engineering standards as well as Provincial health and environmental requirements.

### **iii. Development-Related Capital Program and Analysis of Net Capital Costs to be included in the Development Charges**

A development-related capital program has been prepared by City staff as part of the study. The program identifies development-related projects and their gross and net costs, after allowing for capital grants, subsidies or other contributions as required by the *Act* (*DCA*, s. 5. (2)). The capital program provides another cornerstone upon which development charges are based. The *DCA* requires that the increase in the need for service attributable to the anticipated development may include an increase:

... only if the council of the municipality has indicated that it intends to ensure that such an increase in need will be met. (s. 5. (1) 3.)

In conjunction with *DCA*, s. 5. (1) 4. referenced above, these sections have the effect of requiring that the development charge be calculated on the lesser of the historical ten-year average service levels or the service levels embodied in future plans of the City. The development-related capital program prepared for this study ensures that development charges are only imposed to help pay for projects that have been or are intended to be purchased or built in order to accommodate future anticipated development. It is not sufficient in the calculation of development charges merely to have had the service in the past. There must also be a demonstrated commitment to continue to emplace facilities or infrastructure in the future. In this regard, *Ontario Regulation 82/98*, s. 3 states that:

For the purposes of paragraph 3 of subsection 5 (1) of the Act, the council of a municipality has indicated that it intends to ensure that an increase in the need for service will be met if the increase in service forms part of an Official Plan, capital forecast or similar expression of the intention of the council and the plan, forecast or similar expression of the intention of the council has been approved by the council.

For some projects in the development-related capital forecast, a portion of the project may confer benefits to existing residents. As required by the *DCA*, s. 5. (1) 6., these portions of projects and their associated net costs are the funding responsibility of the City from non-

development charge sources. The amount of City funding for such shares is also identified as part of the preparation of the capital forecast.

There is also a requirement in the *DCA* to reduce the applicable development charge by the amount of any “uncommitted excess capacity” that is available for a service. Adjustments are made in the analysis to meet this requirement of the *Act*. This requirement has been addressed through the use of “net” population and employment in the determination of maximum permissible funding envelopes. Furthermore, the City’s capital programs, and the need for increased capacity, reflects available and useable capacity within existing infrastructure and facilities.

#### **iv. Attribution to Types of Development**

The next step in the determination of development charges is the allocation of the development-related net capital costs between the residential and non-residential sectors. This is done using apportionments for different services in accordance with the demands which the two sectors would be expected to place on the various services and the different benefits derived from those services.

Where reasonable data exist, the apportionment is based on the expected demand for, and use of, the service by each sector (e.g. shares of population and employment).

Finally, the residential component of the development charge is applied to different housing types on the basis of average occupancy factors. The non-residential component is applied on the basis of building GFA in square metres.

### 3. DEVELOPMENT FORECAST

This section provides the basis for the development forecasts used to calculate the development charges, as well as a summary of the forecast results. The forecasts of population, households and employment are based on the 2031 targets for the City as identified in the Region of York's 2017 Development Charges Background Study, which reflects a 45 per cent intensification scenario as approved by Regional Council.

This section begins with a brief discussion of recent growth trends in the GTA and in Vaughan. This is followed by a summary of the results of the housing unit and population forecast and of the non-residential employment and space forecast. A more detailed summary of the forecasts, including tables illustrating historical trends and forecast results is provided in Appendix A.

#### A. VAUGHAN HAS EXPERIENCED RAPID GROWTH IN RECENT YEARS

The GTA and Vaughan have been growing rapidly in population and employment over the last 10 years. All indications point to continued growth in the GTA and Vaughan is expected to remain one of the key players in accommodating this growth.

Due to a comparatively strong economy and national rates of immigration, the GTA has continued to experience residential and non-residential. The City's population is anticipated to have increased from 288,300 in 2011 to 332,100 in 2021, which represents a 15 per cent increase. The number of occupied dwelling units in the City also increased during the ten-year historical period, rising from 86,100 in 2011 to 104,600 – a 22 per cent increase.

The City has also experienced strong employment growth in recent years, adding about 56,500 new employees in the 2012-2021 period.

#### B. RESIDENTIAL FORECAST

Development charges are levied on residential development as a charge per new unit. Therefore, for the residential forecast, a projection of both the *population growth*<sup>1</sup> as well as the *population in new units* is required.

---

<sup>1</sup> Commonly referred to as “net population growth” in the context of development charges.

- The *population growth* determines the need for additional facilities and provides the foundation for the development-related capital program.
- When calculating the development charge, however, the development-related net capital costs are spread over the total additional population that occupy new housing units. This population in new units represents the population from which development charges will be collected.

Table 1 provides a summary of the residential forecast the planning period from 2022 to 2031. As noted in Section 2, for development charge calculation purposes the ten-year planning period is applicable to all City-wide services and has been utilized in the calculation of the development charge.

As shown on Table 1, the City’s census population, is forecast to increase by 82,500 over the next ten years, reaching roughly 414,600 by 2031. Over the ten-year planning period from 2022 to 2031, the number of new occupied dwelling units is forecast to increase by 29,700. This translates to population growth in new units of 82,600.

**TABLE 1**  
**CITY OF VAUGHAN**  
**SUMMARY OF RESIDENTIAL DEVELOPMENT FORECAST**

Development Type	2021 Estimate	Planning Period 2022 - 2031	
		Growth	Total at 2031
<b>Residential</b>			
Total Occupied Dwellings	104,570	29,723	134,293
- <i>Singles &amp; Semis</i>		<i>12,114</i>	
- <i>Rows &amp; Other Multiples</i>		<i>5,940</i>	
- <i>Apartments</i>		<i>11,669</i>	
Total Population			
Census	332,114	82,517	414,632
<i>Population In New Dwellings</i>		<i>82,568</i>	

## C. NON-RESIDENTIAL FORECAST

Development charges are levied on non-residential development as a charge per square metre of GFA. As with the residential forecast, the non-residential forecast requires both a projection of employment growth as well as a projection of the employment growth associated with new floor space in the City.

The non-residential forecast projects an increase of approximately 39,200 jobs to 2031 and across three different employment types (Population Related, Employment Land and Major Office). Further details on these types of employment are provided in Appendix A. The employment growth will be accommodated in 2.6 million square metres of new non-residential building space to 2031.

Table 2 summarizes the non-residential development forecasts.

**TABLE 2**  
**CITY OF VAUGHAN**  
**SUMMARY OF NON-RESIDENTIAL DEVELOPMENT FORECAST**

Development Type	2021 Estimate	Planning Period 2022 - 2031	
		Growth	Total at 2031
<b>Non-Residential</b>

- <i>Major Office</i>		179,933	

## 4. SUMMARY OF HISTORICAL CAPITAL SERVICE LEVELS

The *DCA* and *Ontario Regulation 82/98* require that the development charges be set at a level no higher than the average level of service provided in the municipality over the ten-year period immediately preceding the preparation of the background study, on a service by service basis.

For General Services the legislative requirement is met by documenting historical service levels for the preceding ten years, in this case, for the period from 2012 to 2021. Typically, service levels for General Services are measured as a ratio of inputs per capita, or per capita plus employment.

*O. Reg. 82/98* requires that when determining historical service levels, both quantity and quality of service be taken into consideration. In most cases, the service levels are initially established in quantitative terms. For example, service levels for buildings are presented in terms of square feet per capita. The qualitative aspect is introduced by the consideration of the monetary value of the facility or service. In the case of buildings, for example, the cost would be shown in terms of dollars per square foot to replace or construct a facility of the same quality. This approach helps to ensure that the development-related capital facilities that are to be charged to new development reflect not only the quantity (number and size) but also the quality (value or replacement cost) of service provided historically by the City. Both the quantitative and qualitative aspects of service levels used in the present analysis are based on information provided by City staff and other external consultants, based on historical records and experience with costs to acquire or construct similar facilities, equipment and infrastructure in 2021.

Table 3 summarizes service levels for all applicable services included in the development charge calculation. Appendices B through F provides the detailed historical inventory data upon which the calculation of service levels for the General Services is based. Further details regarding City-wide Engineering services can be found in Appendix G.

TABLE 3

CITY OF VAUGHAN  
SUMMARY OF AVERAGE HISTORIC SERVICE LEVELS 2012 - 2021

Service	2012 - 2021 Service Level Indicator
<b>1.0 LIBRARY SERVICES</b>	<b>\$607.60 per capita</b>

Roads Related Fleet	\$44.21 per capita & employment
<b>5.0 CITY-WIDE ENGINEERING</b>	<b>\$19,619.10 per capita &amp; employment</b>
Total City-wide Engineering	

## 5. THE DEVELOPMENT-RELATED CAPITAL FORECAST

The *DCA* requires the Council of a municipality to express its intent to provide future capital facilities at the average historical service level incorporated in the development charges calculation. As noted in Section II, *Ontario Regulation 82/98*, s. 3 states that:

For the purposes of paragraph 3 of subsection 5 (1) of the Act, the council of a municipality has indicated that it intends to ensure that an increase in the need for service will be met if the increase in service forms part of an official plan, capital forecast or similar expression of the intention of the council and the plan, forecast or similar expression of the intention of the council has been approved by the council.

### A. A DEVELOPMENT-RELATED CAPITAL FORECAST IS PROVIDED FOR COUNCIL'S APPROVAL

Based on the development forecasts summarized in Section III and discussed in detail in Appendix A, City staff, in collaboration with the consultants, have created a development-related capital forecast setting out those projects that are required to service anticipated development. For all services, the capital plan covers the ten-year period from 2022 to 2031.

One of the recommendations contained in this Background Study is for Council to adopt the capital forecast created for the purposes of the development charges calculation. It is assumed that future capital budgets and forecasts will continue to bring forward the development-related projects contained herein, that are consistent with the development occurring in the City. It is acknowledged that changes to the forecast presented here may occur through the City's normal capital budget process.

### B. THE DEVELOPMENT-RELATED CAPITAL FORECAST FOR CITY-WIDE SERVICES

The table provides a separate total for general services and City-wide Engineering services for the ten-year period from 2022 to 2031. Further details on the capital plans for each individual service category are available in Appendices B–G.

The development-related capital program for ten-year general services is estimated at a net cost of \$1.1 billion. No senior government grants, subsidies or other recoveries are expected.

This capital program incorporates those projects identified to be related to development anticipated in the next ten years. It is not implied that all of these costs are to be recovered from new development by way of development charges (see the following Section VI for the method and determination of net capital costs attributable to growth). Portions of this capital program may relate to providing servicing for growth which has occurred prior to 2022 (for which development charge reserve fund balances exist), for replacement of existing capital facilities (e.g. Fire station repositioning) or for other development-related funding sources (including future DC studies and Community Benefits Charges by-law).

Of the \$1.1 billion in ten-year net development-related capital costs for general services, \$858.7 million (76 per cent) is related to the provision of Community Services. A variety of playing fields, tennis courts, playground equipment, basketball and other play courts are included in the capital program. This service category also provides for the development of various neighbourhood, district and regional (or City-wide) parks across the City. In addition, the capital program includes Indoor Recreation projects such as the addition of several new community centres and one animal services facility.

The net growth-related capital forecast for the Library service totals about \$93.9 million (8 per cent). The program includes the addition of several new libraries as well as a replacement for the Kleinburg branch. The capital forecast also includes land and furniture for the new facilities and additions to library collections.

Fire and Rescue Services \$79.8 million (7 per cent) capital program provides for the construction of three new stations. New vehicles and equipment are also included.

The Public Works Buildings and Fleet amount to \$59.7 million (5 per cent). The program is largely attributed to the construction of a new public works facility and additions to the City's road fleet and equipment inventory.

Development-Related Studies represent 4 per cent of the total program and is included at \$44.2 million.

In addition to the development-related capital program for general services, section 6 of Table 4 (page 2) shows an estimate of \$3.0 billion for development-related City-wide Engineering projects. The estimates include provisions for project construction, land acquisition for land which is not available through the *Planning Act*, engineering and design, contingencies and treasury administration. Of note, the forecast provides for \$516.8 million in North Vaughan & Northern Communities area, \$614.4 million for VMC infrastructure and \$295.8 million for the Barrie GO Grade-Separated Railway Crossings. In addition to roads,

the program also provides for water mains, structures, sidewalks, streetlights, intersection improvements, traffic signalization and streetscaping.

## C. THE DEVELOPMENT-RELATED CAPITAL FORECAST FOR AREA-SPECIFIC SERVICES

As shown in Table 5, approximately \$153.3 million in development related capital costs are proposed to be recovered through Area-Specific Development Charges as part of this background study. This includes costs for water (carry forward DCs only), sewer and storm drainage services.

TABLE 5

CITY OF VAUGHAN  
SUMMARY OF AREA-SPECIFIC DEVELOPMENT CHARGE CAPITAL PROGRAM

Service Area - Charge per Hectare	Map Number	Net Cost	Fee Basis
<b>Carry Forward ASDCs</b>

## 6. CALCULATED DEVELOPMENT CHARGES

This section summarizes the calculation of development charges for each service and the resulting total charges by sector. For all City services, the calculation of the development charge per capita (residential) and per square metre (non-residential) is reviewed.

For residential development, the total per capita amount is converted to a variable charge by housing unit type using unit occupancy factors. For non-residential development, the charges are based on the gross floor area of building space.

It is noted that the calculation of the City-wide development charges does not include any provision for exemptions required under the *DCA*, such as the exemption from the payment of DCs for enlargements of up to 50 per cent on existing industrial buildings. Such legislated exemptions, or other exemptions that Council may choose to provide, will result in loss of development charge revenue for the affected types of development. However, any such revenue loss may not be made up by offsetting increases in other portions of the calculated charge.

### A. “UNADJUSTED” DEVELOPMENT CHARGES CALCULATION FOR GENERAL SERVICES

A summary of the residential and non-residential development charges for General Services is presented in Table 6. Further details of the calculation for each individual service are available in Appendices B through F.

The net capital forecast for the General Services totals \$1.1 billion and incorporates those projects identified to be related to development anticipated in the next ten years. However, not all of the capital costs are to be recovered from new development by way of development charges. As shown on Table 6, 4 per cent of the net costs, or \$40.6 million, relates to replacement of existing capital facilities or for shares of projects that provide benefit to the existing community. These portions of capital costs will have to be funded from non-development charge revenue sources, largely property taxes for these services.

An additional share of \$204.4 million (18 per cent) has been identified as development charges reserve funds and represents the revenue collected from prior growth in the City. This portion has been subtracted from the chargeable capital costs.

A share of \$325.3 million (29 per cent) is attributable to other development-related funding sources, including post-period benefit. This development-related share has been removed from the calculation though it may be recovered under future development charge studies. The costs may also be considered for recovery from other growth funding tools (such as CBCs).

The total net costs eligible for recovery through development charges for General Services is \$565.9 million (50 per cent). This amount is allocated between the residential and non-residential sectors to derive the development charges. Library Services and Community Services are deemed to benefit residential development only, while the remaining services are allocated between both residential and non-residential sectors based on shares of population and employment growth in new space. The allocation to the residential sector for these services is calculated at 68 per cent with 32 per cent to the non-residential sector.

Approximately \$527.4 million of the General Services development charges eligible capital program is deemed to benefit residential development. When this amount is divided by the ten-year growth in population in new dwelling units (82,568), an “unadjusted” charge of \$6,386.94 per capita results. The non-residential share totals \$38.6 million and yields an “unadjusted” charge of \$15.11 per square metre when divided by the ten-year increase in non-residential building space (2.6 million square metres).

TABLE 6

Unadjusted Development Charge Per Square Metre									<b>\$15.11</b>

## **B. “UNADJUSTED” DEVELOPMENT CHARGES CALCULATION FOR CITY-WIDE ENGINEERING SERVICES**

Table 7 displays the calculation of the “unadjusted” rates for City-wide Engineering services. The development-related infrastructure will be used to service development in the City over the planning period between 2022 and 2031.

Of the total City-wide Engineering net capital program (\$3.0 billion), no amount has been allocated for the replacement of existing infrastructure or for shares of projects that provide benefit to the existing community as the works included represent only development-related works.

An additional share of \$133.4 million (4 per cent) has been identified as development charges reserve funds and represents the revenue collected from prior growth. This portion has also been subtracted from the chargeable capital costs. A share of \$844.2 million (2 per cent) is attributable to other development-related funding sources, including post-period benefit. This development-related share has been removed from the calculation though it may be recovered under future development charge studies.

The remaining \$2.1 billion is related to development in the planning period and has been included in the development charge calculation.

Similar to the General Services capital program, the capital program eligible for recovery through development charges is allocated to the residential and non-residential sectors based net population and employment growth over the planning period. The allocation remains the same as the General Services, with the residential and non-residential sectors calculated at 68 per cent and 32 per cent respectively.

Of the total development charge eligible cost for City-wide Engineering services, \$1.4 billion is deemed to benefit residential development. When this amount is divided by the long-term growth in population in new dwelling units (82,568) an “unadjusted” charge of \$16,965.11 per capita results.

The non-residential share totals \$659.2 million and, when this amount is divided by the long-term forecast of building space growth (2.6 million square metres) an “unadjusted” charge of \$257.76 per square metre results.

TABLE 7

Unadjusted Development Charge Per Square Metre									\$257.76

## C. RESIDENTIAL & NON-RESIDENTIAL DEVELOPMENT CHARGES

Final adjustments to the “unadjusted” development charge rates summarized above are made through a cash flow analysis. The analysis, details of which are included in Appendices B through G, considers the borrowing cost and interest earnings associated with the timing of expenditures and development charge receipts for each service.

Tables 8 and 9 summarize the results of the adjustment for the residential and non-residential components of the City-wide rates, respectively. As shown in Table 8, the adjusted per capita rate for general services increases from \$6,386.94 to \$6,842.01 after the cash flow analysis. For City-wide Engineering services, the charge increases after the cash flow analysis from \$16,965.11 to \$17,240.04 per capita. Table 9 shows that the total adjusted rate for non-residential development increases from \$272.87 to \$276.36 per square metre.

The residential City-wide development charges are proposed to vary by dwelling unit type to reflect their different occupancy factors and resulting demand for services. The proposed residential and non-residential development charges for City-wide services are shown in Tables 8 and 9. As shown, the proposed residential charge for City services ranges from \$38,530 for small apartments (less than 700 square feet) to \$86,033 for single detached and semi-detached units. The proposed charge for rows (and other multiples) is \$70,780 and \$53,462 for large apartments equal to or greater than 700 square feet.

The proposed non-residential development charge for City-wide services is \$276.36 per square metre (seen in Table 9).

## D. DEVELOPMENT CHARGES FOR AREA-SPECIFIC SERVICES

The development charges for Area-Specific services are summarized on Table 10 for charges levied on a land area basis and Table 11 for charges levied on a per unit basis for residential development and a Gross Floor Area basis for non-residential development. Additional details are contained in Appendix H.

As shown in Table 10 below, the ASDC related to land area based charges range from a low of \$4,290 per net hectare to \$1,512,542 per net hectare reflecting the differing relative servicing costs for the water, wastewater and storm drainage projects. It is noted also that some layering of charges may apply in various development areas. In addition to those ASDC levied on a per net hectare basis, two service areas have been calculated on a charge per unit basis for residential development and a charge per square metre for non-residential development. The per unit/GFA approach is utilized in areas where future development densities are generally known and where costs can be more equitably be distributed to the benefiting developments. Schematic representations of the different service areas are shown on the maps in Appendix H.

Overall, ten ASDCs have been carried forward from the City's last development charges study and two new ASDCs are proposed at this time. It should be noted that the Edgeley Pond and Black Creek Channel Works ASDC recently updated in 2021 as well as the VMC West Interchange Sanitary Sewer ASDC are not being reviewed as part of this study. Furthermore, the ASDC associated with the Pressure District 7 Watermain west is now fully built out and can be closed.

**TABLE 10**

Small Apartments (< 700 square feet)	\$ 318	\$ 154
<b>Charge per Square Metre of Non-Residential GFA</b>	\$ 6.98	\$ 3.81

## 7. COMPARISON OF CALCULATED & CURRENT DCs

Tables 12 and 13 compare the newly calculated residential and non-residential development charges with the City's current charges (as of January 1<sup>st</sup>, 2022).

Table 12 shows that the calculated residential development charge for a single detached unit increases by \$24,818 per unit, or 41 per cent, from \$61,215 per unit to \$86,033 per unit.

The calculated development charge for non-residential development is \$276.36 per square meter, which is an increase of \$97.67 over the existing City rate of \$178.69 per square metre (represents a 55 per cent increase).

The overall increase in the rates is caused by several factors

- First, there has been considerable increase in the capital costs for all City services. The inflation adjustment factor that is prescribed by *O.Reg. 82/98* and which the City uses has not adequately reflected the increase in capital costs that is being experienced in the municipal sector.
- The cost of land has increased significantly in Vaughan and across the GTA and with more intensification the City will have to acquire more land for roads on the open market rather than *Planning Act* dedications.
- A better understanding of the road requirements in the City's key growth areas; and
- The elimination of the 10% statutory discount for all soft services (Library, Development-related Studies and Community Services).

TABLE 12

## 8. COST OF GROWTH ANALYSIS

This section summarizes the examination of the long-term capital and operating costs as well as the asset management-related annual provisions for the capital facilities and infrastructure to be included in the DC By-law(s). The examination is required as one of the provisions of the *DCA*. Additional details on the cost of growth analysis, including asset management analysis, are included in Appendix J.

### A. ASSET MANAGEMENT PLAN

Table 14 summarizes the annual capital provisions required to replace the capital infrastructure proposed to be funded under the development charges by-law. This estimate is based on information obtained through discussions with City staff regarding useful life assumptions and the capital cost of acquiring and/or constructing each asset.

Table 14 illustrates that, by 2032, the City will need to fund an additional \$29.8 million in order to properly fund the full life-cycle costs of the new assets supported under the DC by-law. An additional \$2.5 million is required for the area-specific assets included in this study. The calculated annual funding provision should be considered within the context of the City's projected growth; over the next ten years (to 2031) the City is projecting an increase of 29,700 total occupied dwellings units, which represents a 28 per cent increase over the existing base.

Additionally, 39,200 new employees occupying 2.6 million square metres of non-residential building space are anticipated in the City over the next ten years. This growth will have the effect of increasing the overall assessment base and additional user fee and charges revenues to offset the capital asset provisions required to replace the infrastructure proposed to be funded under the DC by-law.

TABLE 14

CITY OF VAUGHAN

<b>Total</b>	<b>\$ 2,963,772,121</b>	<b>\$ 1,210,039,582</b>	<b>\$ 29,848,973</b>	<b>\$ 12,492,788</b>
<b>ASDC Assets</b>			<b>\$ 2,473,441</b>	

\*Includes costs that will be recovered from development related sources: future development charges studies or other growth funding tools

## B. LONG-TERM CAPITAL & OPERATING COSTS

Appendix J summarizes the estimated increase in net operating costs that the City will experience for additions associated with the planned capital forecast. Table 15 summarizes the estimated increase in net operating costs that the City will experience for additions associated with the planned capital program.

The City’s annual net operating costs are estimated to increase by \$68.5 million by 2031.

Appendix J also summarizes the components of the development related capital program that will require funding from non development charge sources. Of the \$4.2 billion net capital cost of all services, about \$40.6 million will need to be funded from non-development charge sources over the next ten years. This is entirely related to shares of projects related to facility and infrastructure replacement and for non-development-related shares of projects that provide benefit to the existing community.

Council is made aware of these estimates so that they understand the financial implications of the quantum and timing of the projects included in the development related capital forecast in this study.

## **C. THE PROGRAM IS DEEMED TO BE FINANCIALLY SUSTAINABLE**

In summary, the asset management plan and long-term capital and operating analysis contained in Appendix J demonstrates that the City can afford to invest and operate the identified general and engineered services infrastructure over the ten-year planning period.

Importantly, the City's annual budget review allows staff to continue to monitor and implement mitigating measures should the program become less sustainable.

TABLE 15

**CITY OF VAUGHAN**  
**SUMMARY OF LONG TERM CAPITAL AND OPERATING IMPACTS**  
(in thousands of constant dollars)

	2031
<b>Net Operating Impacts</b>	
Development-Related Studies	\$ -
Library Services	\$ 9,245.9

<b>Funding from Non-DC Sources</b>	
Replacement & Benefit to Existing Shares	\$ 40,569.2
<b>FUNDING FROM NON-DC SOURCES</b>	<b>\$ 40,569.2</b>

Notes:

- (1) Existing development charge reserve fund balances collected from growth prior to 2022 are applied to fund initial projects in development-related capital forecast.
- (2) Other development-related net capital costs may be eligible for development charge funding in future DC by-laws or other growth funding tools (CBCs)

## 9. DEVELOPMENT CHARGES ADMINISTRATION

### A. GENERAL ADMINISTRATION

No significant changes are recommended to the City's current policies and practices regarding development charge administration. In this regard:

- It is recommended that practices regarding collection of development charges and by-law administration continue to the extent possible.
- It is further recommended that the collection and administration policies be as consistent as practicable with those of the Regional Municipality of York in order to simplify by-law administration and aid understanding for those required to pay the charges.
- As required under the *DCA*, the City should codify any rules regarding application of the by-laws and exemptions within the development charges by-laws proposed for adoption.
- It is recommended that the by-law permit the payment of a development charge in cash or through services in lieu agreements. The municipality is not obligated to enter into services in lieu agreements.
- That the City continue to use front-ending agreements or developer agreements (or services-in-lieu arrangements), whichever are practical and desirable by the development industry and the City;
- It is recommended that the City continue to pursue cost-sharing and uploading with the Regional Municipality of York for road-related infrastructure that meets the criteria of Regional significance.
- It is recommended that the City examine ways to streamline the administration of ASDCs. This may involve the use of external trustees or additional internal resources.
- It is recommended that Council adopt the development-related capital program included in this background study, subject to annual review through the City's normal capital budget process.

- That Council determine that the future excess capacity identified in the DC Background Study shall be paid for by the development charges contemplated in the said DC Background Study, or other similar charges.

## **B. CONSIDERATION FOR AREA-RATING**

In accordance with the DCA, Council must give consideration to the use of area rating, also known as area-specific development charges, as part of the DC Background Study. As part of the City's 2022 DC Background Study, the appropriateness of implementing area-specific development charges for the various City services was examined and it is deemed appropriate that the study continue to use a City-wide approach for general services and City-wide Engineering services. In addition, area-specific development charges for sanitary sewer and storm drainage works continue to be employed, which is consistent with past practice, and is deemed the best approach to align development-related costs and benefits.

## **C. LOCAL SERVICE POLICY**

The City of Vaughan has a [Local Service Policy](#) which sets out the general guidelines on determining growth-related engineering infrastructure and parkland development that may be eligible for funding, in whole or in part by development charges (DCs) or area-specific development charges (ASDCs).

The *Development Charges Act, 1997 (DCA)* governs what constitutes eligible services for DC funding, and which services are considered ineligible. This policy was used by City of Vaughan Development Engineering staff in the development of the capital program to ensure consistency in the projects included in the DC capital program.

# APPENDIX A

## DEVELOPMENT FORECAST

# APPENDIX A: DEVELOPMENT FORECAST

This appendix provides the details of the development forecast used to prepare the 2022 Development Charges (DC) Background Study for the City of Vaughan. The forecast method and key assumptions are discussed. The results of the forecasts are presented in the following tables:

## Historical Development

Table 1	Historical Population, Occupied Dwellings & Employment Summary
Table 2	Historical Occupied Households by Unit Type
Table 3	Historical Annual Growth in Occupied Households by Unit Type
Table 4	Historical Households by Period of Construction Showing Household Size
Table 5	Historical Place of Work Employment

## Forecast Development

Table 6	Population, Household & Employment Forecast Summary
Table 7	Forecast of Occupied Households by Unit Type
Table 8	Forecast of Annual Growth in Occupied Households by Unit Type
Table 9	Forecast Population in New Households by Unit Type
Table 10	Forecast of Place of Work Employment
Table 11	Forecast of Annual Non-Residential Space Growth

The forecasts of population, households and employment are based on the 2031 targets for the City as identified in the Region of York's 2017 Development Charges Background Study, which reflects a 45 per cent intensification scenario as approved by Regional Council. The forecast and methodology applied in this DC Study remain consistent with those targets and methodology employed in the 2018 City of Vaughan Development Charges Background Study. It is expected that the City of Vaughan will evaluate the forecasts used in this study upon the approval of a new City Official Plan.

## A. FORECAST APPROACH AND KEY ASSUMPTIONS

The *Development Charges Act (DCA)* requires the City to estimate “the anticipated amount, type and location of development” for which development charges may be imposed. The development forecast must cover both residential and non-residential development and be

specific enough with regards to quantum, type, location and timing of development to allow the City to prepare a reasonable development-related capital program.

A “Census-based” definition of population is used for the purpose of the development charges study. This definition does not include the Census net undercoverage, which is typically included in the definition of “total” population commonly used in municipal planning documents.

The forecast is based on Census years and is translated into the time periods required for DC purposes, generally pro-rating the census periods to the DC time period. A ten-year development forecast, from mid-year 2022 to mid-year 2031, has been used for both general services (non-engineering) and City-wide engineering services (roads, water, stormwater).

Employment figures used in DC studies utilize place of work employment values. Place of work employment considers where people work irrespective of their place of residence. The Region’s employment base information is based on employment survey data, adjusted to Census definition base, rather than the exact Census data. The forecast is based on the Schedule 3 employment forecast, which also uses the Census place of work definition of employment. Consistent with the Regional Plan and Schedule 3, the total employment forecast includes workers with no fixed place of work and those who work at home. For DC forecast purposes, the work at home employment is excluded from the calculations since the increased need for service is already captured in the residential forecast.

## **B. HISTORICAL DEVELOPMENT IN THE CITY**

Historical population and household figures presented in the ensuing tables are based on Statistics Canada Census data (up to 2016 where complete dataset exists) and existing Region of York information. Historical place of work employment figures are based on the 2018 DC Study and the Region of York information. For development charges purposes, the ten-year period of 2012 to 2021 is used for calculating historical service levels.

### **i. Growth in Population and Housing Units in Vaughan Has Been Strong (Table 1)**

The City of Vaughan has experienced fairly rapid population and household growth over the last ten years. As shown in Table 1, the City’s population increased from 288,300 people in 2011 to 332,100 in 2021 which represents an increase of 15 per cent. The number of occupied dwelling units in the City also increased significantly during the ten-year historical

period, rising from 86,100 in 2011 to 104,600 occupied households in 2021 – a 22 per cent increase. The difference between the rates of population and occupied dwelling unit growth is the result of a decline in the average number of persons residing in housing units.

As shown in Table 1, the City experienced strong employment growth over the 2011 to 2021 period. Employment in the City, excluding those working at home, has grown from 174,800 employees in 2011 to 231,300 employees in 2021 which represents an increase of 32 per cent. The activity rate (ratio of employees to population) has remained relatively strong over this planning period.

## **ii. Growth in Occupied Households by Unit Type Has Recently Shifted to More Apartments (Tables 2 and 3)**

Details on historical occupied households by unit type in the City are provided in Table 2 and the annual growth in Table 3. Information in these tables is sourced from Statistics Canada and CMHC. Overall, the dominant type of housing in Vaughan since 2012 has been single and semi-detached housing (72 per cent on average). This is followed by apartment dwelling units (16 per cent) and finally, rows and other multiple dwellings (11 per cent). In the time period after 2012, there is a significant shift away from single and semi detached dwellings to apartment dwellings. During the last five years, 51 per cent of new occupied unit types have been apartments with only 29 per cent being single and semi-detached dwellings.

## **iii. Historical Occupancy Patterns (Table 4)**

Table 4 provides details on historical occupancy levels in the City. The overall average occupancy level in Vaughan is 3.23 persons per unit (PPU). For development charges calculations, recently constructed dwellings provide a better indication of occupancy levels of new development that will be paying development charges. For single and semi-detached units constructed between 2006 and 2016, the average occupancy is 3.71 persons per housing unit. This value is higher than the City's overall average for these unit types of 3.51, this outcome is common across Ontario since new dwelling units tend to attract families with children. In many older housing units, children have moved out and two or one person occupancies are relatively more common. A 2016 PPU of 3.05 was used as a base for rows and other multiples which is equal to the ten-year average for recently constructed units.

The PPU value in for all apartments in the City is 1.76, however this value is low compared to most other GTA communities. Accordingly, the PPU value for apartments used in this study is 1.91 and remains consistent with the 2018 DC Study.

As shown in the forthcoming Table 9, the 2016 PPU values in new units for singles and semis and row units are reduced slightly over the forecast period to reflect the aging of the City's overall population. The development charges rates are calculated by using the first five-year average, the life of a DC by-law. The PPUs for apartments is held static over the forecast period, since the occupancies of these units are less prone to change given their smaller size. The trend used in this analysis is consistent with approach employed in the City's 2018 DC Study which sets the foundation for the forecasts in this study.

#### **iv. Growth in Historical Employment by Place of Work (Table 5)**

Table 5 summarizes the historical employment growth by place of work. The forecast has been categorized into major office, population related and in employment land. The slow growth in the employment land sector from 2006 to 2011 is largely attributable to significant employment losses in the industrial sector due to the global recession. Following the recession, employment in this sector has grown between the 2011 and 2016 Censuses.

### **C. FORECAST RESULTS**

This section describes the method used to establish the development forecast for the period of 2022 to 2031.

Development charges are levied on residential development as a charge per new unit. Therefore, for the residential forecast, a projection of both the population growth<sup>1</sup> as well as the population in new housing is required.

- The population growth determines the need for additional facilities and provides the foundation for the development-related capital program.
- When calculating the development charge, however, the development-related net capital costs are spread over the total additional population that occupies new dwelling units. This population in new units represents the population from which development charges will be collected.

Development charges are levied on non-residential development as a charge per unit of gross floor area (GFA). The non-residential forecast includes both a projection of

---

<sup>1</sup> Commonly referred to as "net population growth" in the context of development charges.

employment growth as well as a projection of the floor space associated with employment growth in the City.

### **i. Residential Development Forecast**

The residential development forecast is based on forecasts of population and households, consistent with the York Region 45 per cent intensification scenario used in the Region's 2017 Development Charge Background Study and the City of Vaughan's 2018 Development Charges Study. The population and household growth determines the need for additional facilities and provides the foundation for the development-related capital program. Tables 6, 7 and 8 summarize the population and household growth forecast. The tables show that the City's Census population is forecast to increase by roughly 82,500 over the ten-year planning period. The number of occupied dwellings is forecasted to increase by 29,700 over the ten-year period.

High and medium density units are expected to increase as a share of the City's total housing stock. Apartments are forecasted to represent 39 per cent of new housing construction to 2031. Single and Semi detached units are estimated to comprise 41 per cent of new units with rows comprising 20 per cent.

In addition to the net population forecast, a forecast of "population in new units" that will result from the addition of new housing units has been made (see Table 9). Population growth in new units is estimated by applying the PPU's, described above, to the forecasted housing growth. The persons residing in newly constructed units are based upon the historical time series of population growth in housing in the ten-year Census period (2006-2016). In total, 82,600 is the forecasted population in new dwelling units over the ten-year planning period to 2031.

### **ii. Non-Residential Development Forecast**

City-wide non-residential development charges are calculated on a per square meter basis. Therefore, as required by the *DCA*, a forecast for non-residential building space is provided. Consistent with the residential forecast, the non-residential building space forecast covers a period from 2022 to 2031. The non-residential forecast used in this study is based on the Region of York's DC Study employment forecast.

The forecast of employment in the City is separated into three categories. They are:

- Major office employment – employment in office buildings of 20,000 square feet or greater;

- Population-related employment – employment scattered through the community including most retail and institutional employment; work at home employment is excluded; and
- Employment land employment – the mix of commercial and industrial activities occurring in what are typically (but somewhat inaccurately) called industrial areas.

**a) Major Office Employment and Space Forecast**

In 2021, 19,400 workers or 8 per cent of the City's total employment is employed in the major office category. In the ten-year forecast period Vaughan's major office employment is forecast to increase by 40 per cent to 27,300 employees.

While major office space has a high profile in the community, employment in this category is not a large part of the existing base in Vaughan. This share of total employment is expected to continue grow rapidly with further development within the VMC.

A ratio of 23 m<sup>2</sup> per employee is used in the forecast to estimate future major office building space. Roughly 179,900 m<sup>2</sup> of major office space is forecast to be added by 2031.

**b) Population-Related Employment and Space Forecast**

In 2021, approximately 68,400 or 30 per cent of the City's 231,300 (non work at home) workers are employed in population-related activities. City-wide population-related employment is forecast to grow by 15 per cent between 2021 and 2031 to a total of 78,300.

For converting population-related employment growth to building space a factor of 49 m<sup>2</sup> per employee is used. This is a weighted average of:

- Commercial Development; 67 per cent of growth; 40 m<sup>2</sup> per employee
- Institutional Development; 33 per cent of growth; 67 m<sup>2</sup> per employee

Over the ten-year planning period 2022–2031, about 487,000 m<sup>2</sup> of building space is forecast to be added in this category.

**c) Employment Land Forecast**

Employment within designated employment lands is by far the largest category of employment in Vaughan, and this is expected to remain the case throughout the forecast. Typical operations that occur on employment lands include manufacturing, distribution and smaller offices.

In 2021, an estimated 143,500 people, or 62 per cent of the City's total employment, were employed in the employment lands category. With the development of the West Vaughan Employment Area this amount is expected to grow by 15 per cent over the ten-year forecast to 2031.

Growth in building space on employment lands is forecast by applying a ratio of 88 m<sup>2</sup> per employee. Approximately 1.9 million m<sup>2</sup> are forecast to be added by 2031.

As shown in Table 11, total floor space growth is forecast at 2.6 million m<sup>2</sup> over the ten-year period with an accompanying employment growth of 39,200 (excluding work at home employment).

**APPENDICES B TO F**  
**GENERAL SERVICES**  
**INTRODUCTION AND OVERVIEW**

# GENERAL SERVICES – TECHNICAL APPENDICES

The following five appendices provide the detailed analysis undertaken to establish the development charge rates for each of the general services in the City of Vaughan:

- Appendix B Development-Related Studies
- Appendix C Library Services
- Appendix D Fire and Rescue Service
- Appendix E Community Services
- Appendix F Services Related to a Highway: Public Works: Buildings and Fleet

Every appendix, with the exception of Development-Related Studies, contains a set of three tables. The tables provide the background data and analysis undertaken to arrive at the calculated development charge rates for that particular service. An overview of the content and purpose of each of the tables is given below.

## TABLE 1 HISTORICAL SERVICE LEVELS

Table 1 presents the data used to determine the ten-year historical service level. The *DCA* and *Ontario Regulation 82/98* require that development charges be set at a level no higher than the average service level provided in the municipality over the ten-year period immediately preceding the preparation of the background study, on a service by service basis. For the purpose of this study, the historical inventory period has been defined as 2012 to 2021.

*O. Reg. 82/98* requires that when defining and determining historical service levels both the quantity and quality of service be taken into consideration. In most cases, the service levels are initially established in quantitative terms. For example, service levels for buildings are presented in terms of square feet. The qualitative aspect is introduced by considering the monetary value of the facility or service. In the case of buildings, for example, the cost would be shown in terms of cost per square foot to replace or construct a facility of the same quality. This approach helps to ensure that the development-related capital facilities that are to be funded by new growth reflect not only the quantity (number and size) but also the quality (replacement value or cost) of service provided by the municipality in the past. Both the quantitative and qualitative aspects of service levels used in the current analysis are based on information provided by City staff. This information is generally based on historical records and experience with costs to acquire or construct similar facilities,

equipment and infrastructure which in some instances the data is based information from the City's external consultants.

The final page of Table 1 shows the calculation of the "maximum allowable" funding envelope, net of uncommitted excess capacity. The maximum allowable is defined as the ten-year historical service level (expressed as either \$/capita or \$/population & employment) multiplied by the forecast increase in net population growth, or net population and employment growth, over the future planning period. The resulting figure is the value of capital infrastructure that would have to be constructed for that particular service so that the ten-year historical service level is maintained.

There is also a requirement in the *DCA* to consider "excess capacity" within the City's existing infrastructure that may be available to partially meet the future servicing requirements. If Council has expressed its intent, before or at the time the capacity was created, to recoup the cost of providing the capacity from new development, it is considered "committed excess capacity" under the *DCA*, and the associated capital cost is eligible for recovery. Should notional "uncommitted excess capacity" exist, if it is determined to be available to service new development appropriate adjustments are made to the calculations.

## **TABLE 2    2022 – 2031 DEVELOPMENT-RELATED CAPITAL PROGRAM AND CALCULATION OF THE "UNADJUSTED" DEVELOPMENT CHARGES**

In order to impose a development charge, it is not sufficient to merely base the charge on historical service levels. The *DCA* requires that Council express its intent to provide future capital facilities to support future growth. Based on the development forecasts presented in Appendix A, City staff in collaboration with consultants have developed a development-related capital forecast which sets out the projects required to service anticipated growth for the ten-year period from 2022 to 2031.

To determine the share of the program that is eligible for recovery through development charges, the project costs are reduced by any anticipated grants, subsidies or other recoveries; "replacement" shares and benefit to existing shares.

A replacement share occurs when a new facility will at least in part replace a facility that is demolished, redeployed or will otherwise not be available to serve its former function. The replacement share of the capital program is not deemed to be growth-related and is therefore removed from the development charge calculation. The capital cost for

replacement will require funding from non-development charge sources, typically property taxes.

The capital program less any grants or subsidies and replacement shares or benefit to existing shares yields the development-related costs. Although deemed development-related, not all of the net development-related capital program may be recoverable from development charges in the period from 2022 to 2031. For some services, reserve fund balances may be available to fund a share of the program. In addition, for some services, a portion of the capital program may service development occurring after 2031. This portion of the capital program is deemed “pre-built” service capacity and is to be considered as committed excess capacity to be recovered from future development, or represents future service level increase that may be ineligible for development charge recovery. This portion of the capital program deemed “other development related” can be considered to be funded from future DC by-laws or other growth funding tools such as community benefit charges or through parkland dedication.

The remaining portion of the net capital program represents the development-related cost that may be included in the development charge. In all cases, as required, this amount is equal to or less than the maximum allowable capital amount as calculated on the final page of Table 1. The result is the development-related net capital cost that is eligible for recovery against development over the period from 2022 to 2031.

## **Calculation of the Unadjusted Development Charges Rates**

The section below the capital program displays the calculation of the “unadjusted” development charge rates. The term “unadjusted” development charge is used to distinguish the charge that is calculated prior to cash flow financing considerations. The cash flow analysis is shown in Table 3.

The first step when determining the unadjusted development charge rate is to allocate the development-related net capital cost between the residential and non-residential sectors. For Development-Related Studies, Fire and Rescue Service, and Public Works Buildings and Fleet, the growth-related costs have been apportioned as 68 per cent residential and 32 per cent non-residential. This apportionment is based on the anticipated shares of net population and employment growth over the ten-year forecast period.

The development-related costs associated with the Library Services and Community Services have been allocated 100 per cent to the residential sector because the need for these services is generally driven by residential development.

The residential share of the 2022-2031 DC eligible costs are then divided by the forecast population growth in new units. This gives the unadjusted residential development charge per capita. The non-residential growth-related net capital costs are divided by the forecast increase in non-residential gross floor area (GFA). This yields a charge per square metre of new non-residential GFA.

### **TABLE 3    CASH FLOW ANALYSIS**

A cash flow analysis is also undertaken to account for the timing of projects and receipt of development charges. Interest earnings or borrowing costs, therefore, are accounted for in the calculation as allowed under the *DCA*. Based on the growth forecast, the analysis calculates the development charges rate that is required to finance the net development-related capital spending plan including provisions for any borrowing costs or interest earnings on the reserve funds. The cash flow analysis is designed so that the closing cash balance at the end of the planning period is as close to nil as possible.

In order to determine appropriate development charge rates reflecting borrowing and earnings necessary to support the net growth-related funding requirement, assumptions are used for the inflation rate and interest rate. An inflation rate of 2 per cent is used for the funding requirements and an interest rate of 5 per cent is used for borrowing on the funds and an interest rate of 3.5 per cent is applied to positive balances.

Table 3 displays the results of the cash flow analysis and provides the adjusted or final per capita residential and per square metre (of GFA) non-residential development charges.

# APPENDIX B

## DEVELOPMENT-RELATED STUDIES

## APPENDIX B - DEVELOPMENT-RELATED STUDIES

The *DCA* allows the cost of development-related studies to be included in the calculation of the development charges as long as they are permitted under the legislation. Subsection 7 (3) of the *DCA* allows for a development-related studies class in respect of any service in subsection 2 (4). This appendix covers the costs included for recovery of development-related studies.

### TABLE 1 2022–2031 DEVELOPMENT-RELATED CAPITAL PROGRAM & CALCULATION OF THE “UNADJUSTED” DEVELOPMENT CHARGES

As shown on Table 1, the 2022-2031 development-related gross cost for general government is \$44.2 million. The capital program includes various development-related studies committed to be undertaken and to be funded through the City’s Development-Related Studies DC reserve fund. After funding these studies, the Studies DC Reserve is left in a negative position and included in the capital program for recovery from future DC’s (item 1.8.2 totalling \$7.7 million). The committed project items total \$7.0 million.

The bulk of the remaining studies relate to updating the City Zoning By-Law, Fire Master Plan, the Municipal Comprehensive Official Plan Review (and associated studies), Park Development studies, fiscal impact analyses for new development, development related studies and consultation sessions for the VMC and other high growth areas.

Recognizing that not all studies under this service are entirely a result of new growth in the City, “benefit to existing” shares have been netted off the total net municipal costs. The benefit to existing shares amount to \$4.6 million and this amount will not be recovered through development charges. Committed projects totalling \$7.0 million are funded from the Development-Related Studies DC reserve fund leaving no uncommitted reserves available for future projects. No other development-related shares have been identified for this service.

The remaining \$32.6 million is eligible for development charges funding in the ten-year planning period. This amount is included in the development charge calculation and is allocated 68 per cent, or \$22.2 million to the residential sector and 32 per cent, or \$10.4 million to the non-residential sector based on shares of ten-year growth in net population and employment. The resulting unadjusted per capita residential charge is \$268.69 before cash flow adjustments. The non-residential unadjusted charge is \$4.08 per square metre.

## TABLE 2 CASH FLOW ANALYSIS

After cash flow consideration, the residential charge increases to \$283.94 per capita and the non-residential charge increases to \$4.28 per square metre.

# APPENDIX C

## LIBRARY SERVICES

# APPENDIX C - LIBRARY SERVICES

The Library Board is responsible for the provision of library services in the City of Vaughan. In 2021, the Board operated 12 libraries in various locations throughout the City and the Board expects to expand its service in several growing areas over the next ten years.

## TABLE 1 HISTORICAL SERVICE LEVELS

The total space used in 2021 to provide Library Services in Vaughan totals approximately 186,600 square feet and has a replacement value of \$130.6 million (Page 1). The land associated with this space totals 5.6 hectares and is valued at \$53.6 million. Materials are valued at \$13.8 million and furniture and equipment totals \$10.6 million. Broadband materials are valued at \$116,600. Computer related equipment is excluded in this total as required by the *DCA*.

The replacement value of the 2021 inventory of capital assets for Library Service is \$208.7 million, and the average historical service level over ten years is \$607.60 per capita (Page 4). The historical service level multiplied by the ten-year forecast of net population growth results in a ten-year maximum allowable funding envelope of \$50.1 million (82,517 net population growth x historical service level of \$607.60/capita).

Notional excess capacity of approximately \$6.9 million is identified. However, the notional excess capacity identified cannot be used to meet the capital requirements required by future development, and therefore, the associated capital cost is eligible for recovery and no reduction to the funding envelope is made.

## TABLE 2 2022–2031 DEVELOPMENT-RELATED CAPITAL PROGRAM & CALCULATION OF THE “UNADJUSTED” DEVELOPMENT CHARGES

The 2022–2031 development-related capital program for Library Services totals \$93.9 million and is largely related to the construction of new buildings which is generally informed by the 2017 Active Together Master Plan (ATMP) and discussions with City staff. Furthermore, there are several projects in the Library capital program which are considered to be committed projects previously approved in the Capital Budget and to be funded through the City’s Library DC Reserve fund. These projects are cumulatively valued at \$8.9 million and mainly related to the construction of the Carville Library and the new VMC

Library. The \$8.9 million in committed projects is funded from reserves which leaves about \$4.5 million in uncommitted funds to be applied towards new projects outlined below.

In addition to the committed project list, the first main project is the additional construction costs associated with new Carville library in Block 11 at a cost of \$4.1 million for additional construction and resources. The second project is a new library in Block 41 at a cost of \$15.0 million as well as a new branch in the VMC for \$4.5 million. It should be noted that the assumed principal portions of the debenture payments associated with the VMC Library have been identified in the program; interest costs have been included in the cash flow calculations (see Table 3).

The capital program also includes the construction of three additional libraries in Block 51 (West Woodbridge) for \$13.1 million, Block 27 (\$15.0 million) and Vaughan Mills (\$16.8 million). The capital program includes for the acquisition of land, construction, and resources, furniture, equipment and hardware for these facilities.

In addition, the City is looking to reconstruct the Kleinburg library for \$14.7 million starting in 2026, which includes land acquisition, studies, construction and resource costs. The new library is expected to be about 8,500 square feet, in which, the existing Kleinburg library of 5,600 square feet would be decommissioned, for a total net new space of 2,900 square. Replacement shares of \$9.7 million is determined and this amount will not be recovered through development charges. This allocation is based on a ratio of the building areas of the existing facility to the building areas of the new facility.

Lastly, additional works include the Yonge and Steeles Library studies, design and resources totaling \$1.9 million.

Altogether, the total ten-year development-related capital program for Library Services is \$93.9 million. No provincial government grants/subsidies are available to offset the cost of the program. Non-growth shares, relating to replacement of the existing Kleinburg Library, total \$9.7 million and have been netted off the total cost of the program. About \$4.5 million in uncommitted Library DC reserves are available to help fund the cost of the program. Finally, a portion of the capital program, \$20.7 million, is considered under other development-related sources, and will be considered for recovery in subsequent development charge by-laws or other development-related funding sources (such as a Community Benefits Charge by-law).

The remaining \$50.1 million is related to development between 2022 and 2031, which is allocated entirely against future residential development in the City of Vaughan. This results in an unadjusted development charge of \$607.23 per capita.

### TABLE 3 CASH FLOW ANALYSIS

The cash flow analysis is displayed in Table 3. It considers the timing of the projects against the timing of the development charge revenues to determine adjusted calculated rates. After cash flow analysis, the residential charge increases to \$626.44 per capita.

LIBRARY SERVICES SUMMARY						
10-year Hist.	2022 - 2031		Unadjusted		Adjusted

# APPENDIX D

## FIRE AND RESCUE SERVICE

## APPENDIX D - FIRE AND RESCUE SERVICE

The Vaughan Fire and Rescue Service (VFRS) is responsible for the provision of fire protection services across the City. The *Fire Protection and Prevention Act* defines fire protection services as “...fire suppression, fire prevention, fire safety education, communication, training of persons involved in the provision of fire protection services, rescue and emergency services and the delivery of all those services.”

### TABLE 1 HISTORICAL SERVICE LEVELS

Table 1 displays the ten-year historical inventory for buildings, land, vehicles and equipment. The VFRS currently operates out of 11 stations and other operations-related buildings. The total building area for all fire related buildings in 2021 is 128,000 square feet having a replacement value of \$78.8 million.

The land associated with the fire stations and operations buildings totals 9.3 hectares valued at \$78.8 million. The 2021 fleet totals 71 vehicles with a replacement value of \$32.3 million. Furniture, equipment and broadband in all stations is valued at approximately \$18.4 million.

The 2021 replacement value of the inventory of capital assets for the Fire and Rescue Service totals \$204.2 million and the ten-year historical average service level is \$378.53 per capita and employee (Page 4). It should be noted that the historical average service level has been adjusted to account for committed excess capacity associated with the negative reserve fund balance for Fire Services. The historical service level, multiplied by the ten-year forecast in net population and employment growth, results in a ten-year maximum allowable funding envelope of \$46.1 million and is brought forward to the development charges calculation.

### TABLE 2 2022–2031 DEVELOPMENT-RELATED CAPITAL PROGRAM & CALCULATION OF THE “UNADJUSTED” DEVELOPMENT CHARGES

The development-related capital program for the VFRS is largely based on the Master Fire Plan and Implementation Strategy Update. In addition, there are several projects in the capital program which are considered to be committed projects previously approved in the Capital Budget and to be funded through the City’s Fire and Rescue DC Reserve fund.

These projects are cumulatively valued at \$6.6 million and mainly relate to the new Station 7-12. As a result of funding these projects, the Fire and Rescue Services DC reserve fund balance is in a negative position at year end 2021, and an amount of \$4.2 million is included for recovery through DCs (item 3.2.1).

Station 7-2 Maple is expected to be repositioned starting in 2023 for a total cost of \$19.4 million. Of this amount, about \$12.9 million is deducted from the gross project cost to account for the replacement shares related to the decommissioning of the existing station – this amount will not be recovered through development charges.

Furthermore, the capital program also includes the construction of Station 7-6 at a cumulative cost of \$14.3 million. About \$5.6 million is deducted from the gross project cost to account for the replacement shares related to the decommissioning of the existing station. Although, some new equipment at Station 7-6 is considered to be entirely growth related and accounts for \$2.5 million of the \$14.3 million cost.

In addition to those repositioning stations, VFRS is expected to construct two new stations. The first new station (7-11) is expected to be developed in 2024 for a total cost of \$13.3 million including all land acquisition costs, building, furnishings, equipment and vehicles. Lastly, Station 7-13 is estimated to begin in 2023 with a total project cost of \$18.7 million. The program also includes top-up funding of \$3.2 million for Station 7-12 which relates to construction, equipment and a new vehicle.

Altogether, the ten-year capital program for the VFRS amounts to \$79.8 million. A deduction of \$18.5 million is made to this amount to account for the replacement shares related to the decommissioning of Station 7-2 and Station 7-6 when the new facilities are constructed. A further deduction of \$6.6 million is also made to account for the reserve funds applied to the existing committed projects. Furthermore, a portion of the capital program, \$8.6 million, will be considered for recovery in subsequent development charge by-laws or through other development-related funding sources. The remaining \$46.1 million is related to growth in the 2022–2031 planning period and is eligible for DC recovery.

The development-related net capital cost of \$46.1 million for the VFRS is allocated 68 per cent to residential development (\$31.3 million) and 32 per cent to non-residential development (\$14.7 million). This apportionment is based on the anticipated shares of net population and employment growth over the ten-year forecast period. The residential share of the net growth related capital cost is divided by the ten-year forecast growth in population in new units to derive an unadjusted charge of \$379.59 per capita. The non-residential share of the net development-related capital cost is divided by the ten-year forecast growth in floor space to derive an unadjusted charge of \$5.77 per square metre.

### TABLE 3 CASH FLOW ANALYSIS

After cash flow consideration, the residential calculated charge increases to \$400.73 per capita and the non-residential charge increases to \$6.04 per square metre.

# APPENDIX E

## COMMUNITY SERVICES

## APPENDIX E - COMMUNITY SERVICES

Community Services combines indoor recreation and parks services in the City of Vaughan. Indoor recreation services are provided through the Recreation Services Department and are primarily delivered through community centres located in all areas of the City. Under the *Development Charges Act*, Cultural facilities are not eligible to be recovered through development charges and therefore are excluded from this study.

The City of Vaughan's Parks, Forestry Department is responsible for providing parks, trails and outdoor recreation facilities in the City. Outdoor facilities include baseball diamonds, soccer fields, tennis courts, bocce courts, outdoor swimming pools, wading pools, water play equipment, outdoor rinks, basketball courts, playground equipment and other play courts.

Community Services includes:

- Parks and Recreation
- Services related to proceedings under the Provincial Offences Act, including by-law enforcement services and municipally administered court services. (for animal services).

### TABLE 1 HISTORICAL SERVICE LEVELS

The City of Vaughan's Community Services inventory is separated into twelve categories: Community Centre Space, Land, Equipment, Broadband, Animal Services, Activity Spaces, Parkland Development, Park Facilities, Special Facilities, Trails, Non-Road Vehicles and Parks Operation Buildings & Land.

The City utilizes eleven main indoor recreation facilities to deliver services which have a total area of nearly 1.1 million square feet and a replacement value of \$496.9 million (Page 4). This space includes indoor pools, gymnasiums, arenas, fitness centres, squash courts, indoor bocce courts, bowling alleys, program rooms and other space. Pages 1 to 4 includes a detailed breakdown of total space separated by function and facility. The land associated with the eleven indoor recreation facilities totals 36.8 hectares with a value of \$308.8 million (Page 5). Broadband equipment at the City's recreation buildings adds another \$182,600 to the cost of the inventory (Page 6).

Under the Community Services category, the City owns one animal shelter which has a total area of 6,700 square feet and a replacement value of \$3.4 million. The land for this shelter amounts to 0.05 hectares with a total cost of \$432,400. The equipment at this animal shelter is valued at \$660,400. In total, the animal services component of the inventory is valued at \$4.4 million (Page 7).

The City also operates 24 activity spaces which have a total area of about 77,500 square feet and a replacement value of \$33.6 million (Page 8). The land associated with the activity spaces totals 8.30 hectares with a value of \$67.3 million (Page 9).

The City owns a substantial amount of equipment used to provide recreation services. This includes fitness equipment, ice resurfacers, operations equipment, audio/video equipment and furniture and miscellaneous equipment. The total replacement value of all indoor recreation equipment in 2021 is estimated at \$8.0 million (Pages 10-22).

Vaughan's 2021 inventory of parkland includes 385.6 hectares of neighbourhood parkland (Pages 23-27), 1.4 hectares of public squares (Page 28), 97.4 hectares of regional parkland (Page 30) and 114.8 hectares of district parkland (Page 31). The total cost of developing this parkland is estimated at \$311.0 million (Pages 32-33). The cost of parkland acquisition cannot be included in the development charges inventory as per the *DCA*.

The Parks, Forestry and Horticulture Operations Department currently provides a total of 1,217 park facilities (and associated assets), the majority of which are sports related (Pages 34-60). The total replacement value of these park facilities is \$200.0 million. Vaughan also has an inventory of special City-wide facilities valued at \$14.5 million (Page 61). The City-owned Uplands Golf & Country Club (9 hole golf course and club house) valued at \$7.1 million comprises about half of this amount. The City of Vaughan pedestrian and bicycle trail system add about \$1.5 million to the inventory in 2021, which represents only those trails built by the City (Page 62).

The City of Vaughan owns 737 parks non-road vehicles in its fleet (Pages 63-87) and contracts about \$1.7 million in vehicles. The combined total value of these vehicles (owned and contracted) is \$23.9 million.

The Parks, Forestry and Horticulture Operations department operates from three buildings: The Joint Operations Centre, the Woodbridge Works Building, and the Dufferin Yard (Page 88). The total area of the buildings used Parks, Forestry and Horticulture Operations is 25,736 square feet with a replacement value of \$9.8 million. The value of fixed equipment at these buildings is about \$365,800. Parks, Forestry and Horticulture Operations share of the

land associated with these buildings is approximately 3.6 hectares with a value of \$29.6 million. In total, the value of the Parks Operations inventory is \$39.8 million.

The combined value of capital assets for Community Services is valued at \$1.5 billion (Page 89). The ten-year historical average service level is \$4,788.38 per capita, and this, multiplied by the ten-year forecast of net population growth, results in a ten-year maximum allowable funding envelope of \$395.1 million.

It has been determined that no “uncommitted excess capacity” exists within the Community Services infrastructure, and as such, no adjustments have been made to the service level calculations.

## **TABLE 2    2022 – 2031 DEVELOPMENT-RELATED CAPITAL PROGRAM & CALCULATION OF THE “UNADJUSTED” DEVELOPMENT CHARGES**

The Community Services capital program is based on the 2022 Capital Budget, the 2017 Active Together Master Plan and discussions with City staff. The entire Community Services capital program is delineated into two sub-sections: Indoor Recreation and Park Development and Facilities.

### **Indoor Recreation**

There is one project pertaining to indoor recreation valued at \$65.2 million that is considered to be a committed project in the City’s DC reserve and approved in the Capital Budget. This project relates to the Carrville Community Centre and the total \$65.2 million is to be funded from the City’s Community Services DC reserve fund. It should be noted that the capital program also includes an additional \$28.3 million in top-up funding to construct the facility.

In addition to the committed project list, the construction of three additional community centres are included in the capital program located in Block 41, the VMC, Kleinburg and the top amount for the Carrville Community Centre as noted above. These Community Centres are expected to add new ice rinks, gymnasiums, fitness centres, and multi-purpose program space. The four new community centres are expected to be built at a combined cost \$236.8 million (land and equipment inclusive). It should be noted that the assumed principal portions of the debenture payments associated with the VMC Community Centre have been identified in the program; interest costs have been included in the cash flow calculations (see Table 3).

The capital program also includes a provision for the following: the Vaughan Mills Public Education Space (\$1.7 million), Vaughan Mills Community Hub (\$52.5 million), Block 27 Community Hub (\$47.7 million), West and Highway 7 Community Hub (\$59.1 million) and the Yonge & Steeles Community Centre (\$78.6 million).

The City also proposes to construct a new 20,000 square foot animal services facility at a cost of \$20.3 million. As a result of this new facility, the existing animal services facility will be decommissioned and the replacement shares (\$6.8 million) associated with the existing 6,700 square foot facility is considered in the calculation. The total gross program for the Indoor Recreation portion of the Community Services program amounts to \$562.1 million.

### **Park Development and Facilities**

The Community Services capital program also contains various new park developments which are considered to be committed projects in the City's DC reserve and approved in the Capital Budget. These projects are valued at about \$47.2 million and the largest share is related to the construction of the North Maple Regional Park valued at \$16.1 million. Other significant projects include the VMC Library and Recreation Centre at \$4.4 million and the Block 23 VMC Expo City Park Development at \$3.8 million. In total, \$47.2 million of these committed projects is funded from the City's available DC reserve fund ultimately reducing the uncommitted balance available for future projects.

Over the next ten-years, several new playing fields and playgrounds are planned to be built on the newly developed parkland. The capital program includes for the development of several new hectares of parkland at a cost of \$144.8 million with new fields and playgrounds included at an additional cost of \$50.4 million. Furthermore, the development-related capital program includes a provision of about \$22.6 million for the expansion of the City's managed trail network.

Two new operational facilities (parks share only) are included for development in the ten-year capital program: Dufferin Yard and a new North Operations Centre (NOC). The total cost of developing these facilities is estimated to be \$24.9 million including the remaining cost of servicing the site to accommodate the NOC. The Dufferin Yard project has replacement shares valued at \$475,200, which is deducted off the total project cost. New additions to the non-road fleets and related equipment category add another \$6.7 million to the Park Development and Facilities portion of the Community Services capital program.

The total gross program for the Park Development and Facilities portion of the Community Services program amounts to \$296.6 million.

## Community Services Summary

The ten-year capital forecast for Community Services totals \$858.7 million. No provincial government grants or subsidies are anticipated to offset the cost of the program. Non-growth shares in the amount of \$7.3 million related to the animal shelter and the Dufferin Yard is netted off the net municipal cost of the program, leaving \$851.4 million as the total development related costs.

The total reserve fund balance before commitments is about \$166.2 million, after considering the funds applied to the committed projects noted, approximately \$53.8 million is available in the City’s uncommitted Community Services DC reserve fund to help offset the cost of the program. Lastly, \$290.1 million, the portion of the development-related cost which exceeds the maximum allowable funding envelope can be recovered through subsequent development charges studies or other development-related funding sources (such as a Community Benefits Charges by-law). The City’s CBC Strategy identifies the share of “other development related” costs attributed to CBCs where applicable.

The 2022–2031 DC costs eligible for recovery amount to \$395.1 million, which is allocated entirely against future residential development in the City. This results in an unadjusted development charge of \$4,785.48 per capita.

### TABLE 3 CASH FLOW ANALYSIS

After cash flow consideration, the residential calculated charge increases to \$5,120.86 per capita. The following table summarizes the calculation of the Community Services development charges.

COMMUNITY SERVICES SUMMARY						
10-year Hist. Service Level per capita	2022 - 2031 Development-Related Capital Program		Unadjusted Development Charge		Adjusted Development Charge	
	Total	Net DC Recoverable	\$/capita	\$/sq.m	\$/capita	\$/sq.m
\$4,788.38	\$858,728,737	\$395,125,180	\$4,785.48	\$0.00	<b>\$5,120.86</b>	<b>\$0.00</b>

**SERVICES RELATED TO A HIGHWAY:**

**PUBLIC WORKS: BUILDINGS AND FLEET**

# APPENDIX F – SERVICES RELATED TO A HIGHWAY

## - PUBLIC WORKS: BUILDING AND FLEET

This appendix covers the yards and fleet components of the City’s operations. The Public Works Department operates from several works yards located throughout the City to provide repair and maintenance services for roads, sidewalks, streetlights and other infrastructure. The City also operates a centralized fleet maintenance operation for the vehicles of nearly all municipal departments, with the exception of the Fire department which maintains its own rolling stock. The works buildings and fleet maintenance functions referred to in this section are solely related to the provision of Public Works services. Non public works fleets (i.e. parks) are accounted for in the Community Services inventory and capital program in Appendix E. Information regarding roads and related infrastructure can be found in Appendix G.

### TABLE 1 HISTORICAL SERVICE LEVELS

The Public Works department operates out of three primary locations: Woodbridge Works Building, the Joint Operations Centre and the Dufferin Yard. Fire Station 7-4 is used as storage for the Public Works service. The current inventory of capital assets for Public Works includes approximately 96,400 square feet of building space, including salt domes, with a replacement value of \$24.5 million (Page 1). The 21 hectares of land associated with the Public Works yards is valued at \$158.8 million. The Public Works fixed equipment adds \$169,800 to the value of the inventory. The 2,226 vehicles used by the public works departments (i.e. excluding fire, community services, etc.) and as well as those vehicles contracted for service add an additional \$30.4 million to the value of the capital assets (Pages 2-8). The vehicles that are owned by the City account for \$16.6 million of this total, while leased vehicles account for \$13.8 million (Page 8).

As shown on Page 9, the total value of the Public Works capital asset inventory is \$213.9 million. The ten-year historical average service level is \$344.99 per capita and employee, and this, multiplied by the ten-year forecast growth in net population and employment, results in a ten-year maximum allowable funding envelope of \$42.0 million. No uncommitted excess capacity exists for this service.

## **TABLE 2    2022 – 2031 DEVELOPMENT-RELATED CAPITAL PROGRAM & CALCULATION OF THE “UNADJUSTED” DEVELOPMENT CHARGES**

The Public Works: Buildings and Fleet Capital Program is based on discussions with City staff. Table 2–Page 1 illustrates \$4.8 million in public works projects which have been previously approved in the Capital Budget and considered to be committed projects in the City’s Public Works DC Reserve Fund. After commitments, about \$6.4 million in uncommitted DC reserves are available to fund new projects outlined below.

Three new operational facilities (public works share only) are included for development in the ten-year capital program: interim storage and office space at the Dufferin Yard (2024), the debt associated with the North Operations Centre (NOC) from 2026 to 2031 and a more fulsome new facility at Dufferin Yard in 2027. The total cost of these projects is estimated to be \$48.5 million including the remaining cost of servicing the land to accommodate the NOC. It should be noted that the assumed principal portions of the debenture payments associated with the NOC have been identified in the program; interest costs have been included in the cash flow calculations (see Table 3). Lastly, new road related vehicle and equipment additions of approximately \$6.4 million are also planned over the period to 2031.

The total ten-year capital program for Public Works totals \$59.7 million. No provincial government grants or subsidies are anticipated to offset the cost of the program. A deduction of \$475,200 is made to account for the benefit to existing shares related to the replacement components of this interim Dufferin Yards facility. An amount of \$6.4 million is available in the uncommitted Public Works DC reserve fund to help offset the cost of the program. Lastly, \$5.9 million, the portion of the development-related cost which exceeds the maximum allowable funding envelope, can be recovered through subsequent development charges by-laws or other development-related funding sources.

The 2022–2031 DC costs eligible for recovery totals to \$42.0 million. This development related cost is allocated 68 per cent, or \$28.6 million, against new residential development, and 32 per cent, or \$13.4 million, against non-residential development. This is based on anticipated shares of net population and employment growth over the ten-year forecast period, yielding an unadjusted development charge of \$345.95 per capita and \$5.26 per square metre.

### TABLE 3 CASH FLOW ANALYSIS

After cash flow consideration, the residential calculated charge increases to \$410.04 per capita and the non-residential calculated charge increases to \$6.20 per square metre.

The following table summarizes the calculation of the Public Works: Buildings and Fleet development charge.

PUBLIC WORKS: BUILDINGS AND FLEET SUMMARY						
10-year Hist.	2022 - 2031		Unadjusted		Adjusted	
Service Level	Development-Related Capital Program		Development Charge		Development Charge

# APPENDIX G

## CITY-WIDE ENGINEERING

# APPENDIX G – CITY-WIDE ENGINEERING

The City’s Development Engineering and Infrastructure Planning Department is responsible for the design and construction of the City’s extensive network of road, water, sewer and stormwater infrastructure.

This appendix provides a brief outline of the City-wide Engineering service and the development-related projects which are required in order to provide City-wide engineered services to 2031. As discussed in Appendix A, the City’s population is forecast to increase by about 82,500 people and 39,200 employees, excluding those working at home, over the 2022–2031 period.

The following sections set out the 2022–2031 Development-Related Capital Program and the calculation of the “unadjusted” development charge. The cost, quantum and timing of the projects included in the forecast have been provided by the Development Engineering and Infrastructure Planning Department with support provided by HDR consulting engineers.

The City-wide Engineering Services includes:

- Services Related to a Highway;
- Water services;
- Storm drainage and control services; and
- Development related studies.

The development charges for sewer and other stormwater infrastructure are recovered through area specific charges.

## A. TABLE 1 HISTORICAL SERVICE LEVELS

Table 1 provides the ten-year historical service level for City-wide engineering. The City’s corporate asset management inventory data and discussions with City staff was used to populate the DC table. As shown on Page 3, the total value of the capital asset inventory is \$10.5 billion. The ten-year historical average service level is \$19,619.10 per capita and employee, and this, multiplied by the 2022–2031 forecast growth in net population and employment, results in a maximum allowable funding envelope of \$2.4 billion.

## TABLE 2 CITY-WIDE ENGINEERING PROJECTS TOTAL \$3.1 BILLION

Table 2 summarizes the net development-related City-wide engineering capital program to 2031. The total cost of the engineering program is larger than the program included in the City's last DC Study. This increase is due to several factors:

- Understanding of the road requirements in the City's key growth areas including the VMC, northern areas (Blocks 27, 41, and 55) and employment areas (Blocks 34 & 35).
- The cost of land has increased significantly in Vaughan and across the GTA and with more intensification, the City will have to acquire more land for roads on the open market rather than *Planning Act* dedications.
- Generally, the base unit costs of undertaking engineering projects have increased faster than price inflation indices.

The engineering projects are spread out throughout the City with the VMC comprising 20 per cent of the capital program, the North Vaughan & Northern Communities 17 per cent, Barrie GO Grade-Separated Railway Crossings 10 per cent and the West Vaughan Employment Area 8 per cent. The net municipal cost of the program totals \$3.0 billion. The estimates include provisions for project construction, land acquisition for land which is not available through the *Planning Act*, engineering and design, contingencies and treasury administration. It should be noted that information on most major projects was provided to the development industry and their consultants in advance of the preparation of this Study. This consultation and data sharing is anticipated to continue through to by-law passage.

Table 3 provides more detail on the capital program including the timing of the expenditures. Additional detailed tables are also provided for Traffic Signals (Table 4) Sidewalks and Streetlighting (Table 5), Studies (Table 6) and Watermains (Table 7). Anticipated grants and subsidies, which are anticipated for certain projects have already been netted off the program.

Vaughan's City-wide Engineering uncommitted reserve fund balance is \$133.4 million which has been collected from prior development. These funds are applied to the first occurring projects as shown in the cash flow statements.

Following internal review and consultation with the development industry from the 2018 DC Study process, the City has maintained the identified shares of projects in this study that has been deferred to beyond the 2022–2031 DC recovery period which totals \$844.2 million.

It is expected that these costs will be recovered through subsequent development charges by-laws.

The City-wide Engineering DC recoverable capital program included in the development charge calculation totals \$2.1 billion.

### **City-Wide Engineering Charge is \$16,965.11 Per Capita for Residential Development and \$257.76 Per Square Metre for Non-Residential Development**

As shown in Table 2, the “unadjusted” residential and non-residential development charges are calculated at \$16,965.11 per capita and \$257.76 per square metre respectively. The residential development charge represents the residential share of net growth-related capital costs of \$1.4 billion divided by the population of 82,600 expected in new units between 2022 and 2031. The non-residential development charge represents the non-residential share of net growth-related capital costs of \$659.2 million divided by the total growth in GFA of 2.6 million square metres that is forecast between 2022 and 2031. The residential and non-residential allocation of costs is based on each sectors share of population and employment growth that is forecast between 2022 and 2031. On this basis, the residential sector is allocated 68 per cent of City-wide Engineering costs, while the non-residential sector is allocated the remaining 32 per cent.

### **TABLE 3 CASH FLOW ANALYSIS**

The unadjusted development charge rates are further adjusted through a cash flow analysis as presented in Table 8. The resulting residential charge is calculated at \$17,240.05 per capita and the non-residential charge is calculated at \$259.84 per square metre. The increase from the “unadjusted” charges shown in Table 2 is largely the result of projects occurring early in the forecast period.

<b>CITY-WIDE ENGINEERING SUMMARY</b>

# APPENDIX H

## AREA-SPECIFIC DEVELOPMENT CHARGES

# APPENDIX H – AREA-SPECIFIC DEVELOPMENT CHARGES

The Development Engineering and Infrastructure Planning Department is responsible for the design, construction and maintenance of the City’s network of watermains, sanitary sewers and storm drainage facilities.

The following section sets out the calculation of the Area-Specific Development Charges (also referred to as SACs). The cost of the projects included in the various areas has been provided by the Development Engineering and Infrastructure Planning Department.

As shown in the ensuing tables below, the ASDC related to land area based charges range from a low of \$4,290 per net hectare to \$1,512,542 per net hectare reflecting the differing relative servicing costs for the water, wastewater and storm drainage projects. It is noted also that some layering of charges may apply in various development areas. In addition to those ASDC levied on a per net hectare basis, two service areas have been calculated on a charge per unit basis for residential development and a charge per square metre for non-residential development. The per unit/GFA approach is utilized in areas where future development densities are generally known and where costs can be more equitably be distributed to the benefiting developments. Schematic representations of the different service areas are shown on the maps in this Appendix.

Overall, ten ASDCs have been carried forward from the City’s last development charges study and two new ASDCs are proposed at this time. It should be noted that the Edgeley Pond and Black Creek Channel Works ASDC recently updated in 2021 as well as the VMC West Interchange Sanitary Sewer ASDC are not being reviewed as part of this study. Furthermore, the ASDC associated with the Pressure District 7 Watermain west is now fully built out and can be closed.

# APPENDIX I

## DEVELOPMENT CHARGE RESERVE FUNDS

# APPENDIX I – DEVELOPMENT CHARGE RESERVE FUNDS

The *Development Charges Act* requires that a reserve fund be established for each service for which development charges are collected. Table 1 presents the uncommitted reserve fund balances that are available to help fund the growth-related net capital costs identified in this study. The opening balances of the development charges reserve funds as at December 31, 2021, have been adjusted to account for current commitments to projects. All of the available reserve fund balances are therefore accounted for in this study.

As shown on Table 1, the December 31, 2021, total reserve fund uncommitted balance was \$186.3 million for all services, of which \$52.9 million is related to general services and \$133.4 million for City-wide Engineering.

The application of the available uncommitted balance in each of the reserve funds is discussed in the appendix section related to each service. These funds are assigned to projects in the initial years of the capital program for each service. This has the effect of reducing and deferring capital costs brought forward to the development charge calculation and the cash flow analysis.

**APPENDIX I**

# APPENDIX J

## COST OF GROWTH ANALYSIS

# APPENDIX J – COST OF GROWTH ANALYSIS

## A. ASSET MANAGEMENT PLAN

The *Development Charges Act* now requires that municipalities complete an Asset Management Plan before passing a development charges by-law. A key function of the Asset Management Plan is to demonstrate that all assets proposed to be funded under the development charges by-law are financially sustainable over their full life-cycle.

### i. Asset Types

A summary of the future City-owned assets and estimated useful life assumptions for eligible DC services considered as part of the study are outlined in Table 1. Although all capital assets considered in the study have been identified, not all assets necessitate future replacement or ongoing maintenance activities. Some projects do not relate to the emplacement of a tangible capital asset – some examples include the acquisition of land, recovery of completed projects or the undertaking of development-related studies. These projects/costs do not necessarily require future replacement or ongoing maintenance. Such projects are identified as “not infrastructure” in the table.

It should be noted that the capital cost estimates prepared for each of the projects identified in this section include grouped costs of various individual elements, which, as a stand-alone item, may have its own useful life (ex. New buildings include: HVAC, structural elements, roof, etc.). Accordingly, the average useful life assumptions noted below are applicable to all project components.

TABLE 1 SUMMARY OF CITY ASSETS CONSIDERED	
<b>Library Services</b>	
▪ Land Acquisition	▪ Not infrastructure

▪ Fire Engine	▪ 15 years
<b>Community Services</b>	
▪ Land Acquisition	▪ Not infrastructure
▪ Buildings	▪ 60 years
▪ Furniture & Equipment	▪ 5-10 years
▪ Park Facilities	▪ 10-30 years
▪ Non-Road Vehicles & Equipment	▪ 7-25 years
<b>Public Works: Buildings and Fleet</b>	
▪ Land Acquisition	▪ Not infrastructure
▪ Facilities	▪ 60 years
▪ Road Vehicles & Equipment	▪ 7-20 years
<b>Development-Related Studies</b>	
▪ Recovery of Negative Reserve Fund	▪ Not a long-term asset
▪ Development-Related Studies	▪ Not infrastructure
<b>City-Wide Engineering</b>	
▪ Traffic control and signalization, road infrastructure, rail grade separations, streetscaping, sidewalk, streetlighting, watermains	▪ Assets in this category have a 20-80 year useful life

No annual provisions have been identified for Development-Related Studies as the plan updates and studies included in the development charge category are not infrastructure and therefore have no long-term financial requirements.

## ii. Annual Provision

When assets require rehabilitation or are due for replacement, the source of funds is limited to reserves or contributions from operating. Capital expenditures to carry out the rehabilitation and replacement of aging infrastructure are not growth-related and are therefore not eligible for funding through development charge revenues or other developer contributions.

Based on the useful life assumptions and the capital cost of acquiring and/or emplacing each asset, a provision for infrastructure replacement has been calculated for both the

general and engineered services. Provisions for infrastructure replacement are initially calculated for each asset based on their useful life and the anticipated cost of replacement. The aggregate of all individual provisions form the required annual capital provision. In calculating the annual provisions, a number of assumptions are made to account for inflation (2.0 per cent) and interest (3.5 per cent).

Consistent with the requirements of the DCA, assets that are proposed to be funded under the development charges by-law have been included in the analysis. As a result, the total calculated annual provision for development charge related infrastructure has been netted down to consider the replacement of existing infrastructure or benefit-to-existing development. However, for reference, the annual replacement provisions associated with the non-development charge funded costs, including costs related to the benefit-to-existing and post-period benefit have also been calculated.

Table 2 provides the calculated annual asset management contribution for both the gross capital expenditures and the share related to the 2022 to 2031 DC recoverable portions. The year 2032 has been included to calculate the annual contribution for the planning periods 2022 to 2031 as the expenditures in 2031 will not trigger asset management contributions until 2032. As shown in Table 2, by 2032, the City will need to fund an additional \$29.8 million in order to properly fund the full life cycle costs of the new assets related to all services supported under the development charges by-law. In addition, annual provisions related to the City's rate related assets covered by the Area Specific Development Charges amounts to \$2.5 million.

**APPENDIX J  
TABLE 2**

**CITY OF VAUGHAN  
ANNUAL ASSET MANAGEMENT PROVISION BY 2032**

Service	2022-2031 Capital Program		Calculated AMP Annual Provision by 2032	
	DC Related	Non-DC Related*	DC Related	Non-DC Related
Development-Related Studies	\$ 39,601,274	\$ 4,569,015	\$ -	\$ -
Library Services	\$ 63,534,117	\$ 30,387,126	\$ 1,680,634	\$ 1,089,436
Fire And Rescue Services	\$ 52,650,854	\$ 27,115,874	\$ 1,151,531	\$ 569,496
Community Services	\$ 561,349,871	\$ 297,378,867	\$ 7,318,739	\$ 4,865,049
Public Works: Buildings And Fleet	\$ 53,273,847	\$ 6,412,837	\$ 1,280,372	\$ 389,420
City-Wide Engineering	\$ 2,193,362,158	\$ 844,175,864	\$ 18,417,697	\$ 5,579,386
<b>Total</b>	<b>\$ 2,963,772,121</b>	<b>\$ 1,210,039,582</b>	<b>\$ 29,848,973</b>	<b>\$ 12,492,788</b>
<b>ASDC Assets</b>			<b>\$ 2,473,441</b>	

*\*Includes costs that will be recovered from development related sources: future development charges studies or other growth funding tools*

### iii. **Future Revenue Growth**

The calculated annual funding provision should be considered within the context of the City's projected growth. Over the next ten years, the City is projected to increase by approximately 82,500 people. In addition, the City will also add about 39,200 new employees that will result in approximately 2.6 million square metres of additional non-residential building space.

This growth will have the effect of increasing the overall assessment base. This leads to additional user fee and charge revenues to offset the capital asset provisions required to replace the infrastructure proposed to be funded under the development charges by-law. The collection of these funds is intended to be allocated to the City's reserves for future replacement of these assets.

## **B. LONG-TERM CAPITAL AND OPERATING IMPACTS**

As shown in Table 3, by 2031, the City's net operating costs are estimated to increase by \$68.5 million for all development charge eligible services. Increases in net operating costs relate to new facilities or expansions of existing facilities (such as libraries, community centres and fire stations), additional road works and expansions to existing roadways, and other assets are brought online to service development in the City.

**APPENDIX J**

**TABLE 3**

**CITY OF VAUGHAN  
SUMMARY OF LONG TERM CAPITAL AND OPERATING IMPACTS  
(in thousands of constant dollars)**

	<b>2031</b>
<b>Net Operating Impacts</b>	
Development-Related Studies	\$ -
Library Services	\$ 9,245.9
Fire And Rescue Services	\$ 10,191.9
Community Services	\$ 39,854.4
Public Works: Buildings And Fleet	\$ 840.1
City-Wide Engineering	\$ 8,322.4
<b>NET OPERATING IMPACTS</b>	<b>\$ 68,454.7</b>

	<b>Total to 2031</b>
<b>Long-Term Capital Impact</b>	
Total Net Cost	\$ 4,173,811.7
Net Cost from Development Charges	\$ 2,625,936.2
Prior Growth Share from DC Reserve Balances (1)	\$ 337,835.9
Portion for Other Development-Related Funding (2)	\$ 1,169,470.4
<b>Funding from Non-DC Sources</b>	
Replacement & Benefit to Existing Shares	\$ 40,569.2
<b>FUNDING FROM NON-DC SOURCES</b>	<b>\$ 40,569.2</b>

Notes:

- (1) Existing development charge reserve fund balances collected from growth prior to 2022 are applied to fund initial projects in development-related capital forecast.
- (2) Other development-related net capital costs may be eligible for development charge funding in future DC by-laws or other growth funding tools (CBCs)

Table 4 summarizes the components of the development-related capital forecast that will require funding from non-DC sources (e.g. property tax) for the planning period 2022 to 2031. In total, \$40.6 million will need to be financed from non-DC sources over the planning period to 2031 and is related to facilities and infrastructure that will benefit the existing community. In addition, \$1.2 billion in interim financing related to other development related shares of projects may be required. However, because DC By-laws must be revisited at least every five years, it is difficult to determine the quantum of interim financing that may be necessary.

APPENDIX J

TABLE 4

CITY OF VAUGHAN  
SUMMARY OF DEVELOPMENT CHARGE ELIGIBLE AND INELIGIBLE COSTS

Service	Development-Related Capital Program (2022-2031)				Total DC Eligible Costs for Recovery (in \$000)
	Net Municipal Cost (in \$000)	Replacement & Benefit to Existing (in \$000)	Prior Growth (in \$000)	Other Dev. Related (in \$000)	
1.0 Development-Related Studies	\$44,170.3	\$4,569.0	\$6,976.4	\$0.0	\$32,624.9
2.0 Library Services	\$93,921.2	\$9,702.9	\$13,396.6	\$20,684.3	\$50,137.5
3.0 Fire And Rescue Services	\$79,766.7	\$18,534.7	\$6,560.4	\$8,581.2	\$46,090.4
4.0 Community Services	\$858,728.7	\$7,287.4	\$166,224.7	\$290,091.5	\$395,125.2
5.0 Public Works: Buildings And Fleet	\$59,686.7	\$475.2	\$11,267.3	\$5,937.6	\$42,006.5
6.0 City-Wide Engineering	\$3,037,538.0	\$0.0	\$133,410.5	\$844,175.9	\$2,059,951.7
<b>Total</b>	<b>\$4,173,811.7</b>	<b>\$40,569.2</b>	<b>\$337,835.9</b>	<b>\$1,169,470.4</b>	<b>\$2,625,936.2</b>

Council is made aware of these factors so that they understand the operating and capital costs that will not be covered by DCs as it adopts the development-related capital forecast set out in the study.

### C. THE PROGRAM IS DEEMED FINANCIALLY SUSTAINABLE

In summary, the Asset Management Plan and long-term capital and operating analysis included in this appendix demonstrates that the City can afford to invest and operate the identified general and engineered services infrastructure over the ten-year and long-term planning periods.

Importantly, the City’s annual budget review allows staff to continue to monitor and implement mitigating measures should the program become less sustainable.

**APPENDIX K**

**2022 DEVELOPMENT CHARGES BY-LAW**

**(TO BE PROVIDED UNDER SEPARATE COVER)**
